

**Investment Objective**

The Fairtree Global Emerging Markets Prescient Fund is an actively managed global equity fund. The objective of the fund is to offer long term capital growth by investing in emerging equity markets or in companies that derive a significant portion of their revenue in emerging economies. The portfolio is constructed in a diversified manner and aims to provide returns above the index.

**Investment Policy**

The objective of the Fairtree Global Emerging Markets Prescient Fund is to provide investors with long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies. Our investment philosophy is to buy quality companies, that are growing earnings, at attractive valuations below intrinsic value. In order to achieve this objective, the portfolio uses a quantitative screening process, based on various factors, to identify the most attractive opportunities. Fundamental research is then performed to determine the inclusion and sizing of positions.

MARKET COMMENTARY

The Fund returned -1.94% for the month, underperforming the benchmark by -0.60%. Following the October drawdown, the MSCI ACWI Index increased by 3.7%. However, the MSCI Emerging Markets Index decreased by 3.6% (all in USD) on the back of a stronger US dollar and the impact of potential tariffs from the US.

The US market showed strong gains for the month, driven by expectations of higher growth and lower taxes following Donald Trump's win in the US presidential election. US Inflation, as measured by the consumer price index, increased to 2.6% in October from the 2.4% reported in September. However, the Federal Reserve still cut interest rates by 25 basis points to the range of 4.5% to 4.75% at the November meeting. European shares ended the month 1.68% lower, as concerns over potential tariffs from the US and continued weak data points weighed on the market. The French market dropped 4.2% on the back of debt concerns, while Germany saw its coalition government collapse with elections due to start in February. Within Emerging Markets, Turkey was the strongest performer, while Indonesia and Brazil underperformed. China decreased by 4.4% on the back of uncertainty around the implications of higher tariffs on exports to the US. On a sector level, Information Technology was the worst performing over the month; however, our underweight position added to relative performance. Consumer discretionary, where the Fund has an overweight holding, was the second worst-performing sector and detracted from absolute and relative performance. Stock picking in Consumer Staples and Materials contributed to relative performance over the month.

Noteworthy portfolio actions over the month include trimming our holding in Prosus. We increased our position in Chinese e-commerce names, notably JD.com, Alibaba and PDD Holdings. Positions in the National Bank of Greece, Li Ning Co Ltd and Kia Corp were also topped up. Notable contributors to Fund performance were holdings in TBC Bank Group (+19 bps absolute and relative), Netease Inc (+10 bps absolute, +6 bps relative) and JB Financial Group (+9 bps absolute and relative). Notable detractors from performance over the month came from PDD Holdings (-76 bps absolute, -56 bps relative), Alibaba (-34bps absolute, -11bps relative) and JD.com (-19bps absolute, -16bps relative)

The Fund's style and country positioning remain largely unchanged, with Kazakhstan the largest overweight through positions in Kaspi and Halyk. The Fund remains underweight in Taiwan and India, where both markets continue to trade on elevated valuations compared to their history and Emerging market peers.

### Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest Performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Sortino Ratio:** A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

### Specific Risk

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives Risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) Risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment Risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest Rate Risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property Risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency Exchange Risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector Risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative Counterparty Risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity Risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity Investment Risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

### Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

### Risk Indicator Definition

The Fund will mainly invest in large and mid cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies.

### Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
