

RisCura High-Equity Prescient Fund of Funds

Minimum Disclosure Document & General Investor Report

Inception date: 01 December 2020

Effective date: 31 March 2026

Investment Objectives And Policy

The Manager in selecting collective investment schemes for the portfolio will aim to maximise long-term capital growth. Asset allocation will be managed actively, and the Fund will seek to capture value opportunities by switching between asset classes with a focus on equity selection opportunities. In order to achieve this objective, the RisCura High Equity Prescient Fund of Funds will, apart from assets in liquid form, consist solely of participatory interest in collective schemes which will invest in a diversified mix of assets, including but not limited to equities, property, preference shares, money market and fixed interest instruments. The equity allocation will be managed at a maximum effective exposure, including offshore equity, up to 75%. The underlying collective investment schemes are permitted to invest in listed and unlisted financial instruments in line with conditions as determined by legislation from time to time. The portfolio will predominantly invest in South African markets but is however permitted to include investments in offshore jurisdictions subject to the investment conditions determined by legislation from time to time. The portfolio has adhered to its policy objective.

Fee Structure

| Fee Class | Class B1 | TER | 1.35% |
|----------------------------|----------|-----------------|-------|
| Applicable Management fees | 0.88% | Transaction Fee | 0.12% |
| Performance Fee | No Fee | TIC | 1.47% |

The Applicable management fees exclude VAT
The Management Fee changed from 0.88% to 0.61% effective 2 January 2026.
The TER shown is as at 31 December 2025 and includes the previous management fee. Revised TER/TIC figures will be reflected once available

Positioning and Outlook

The first quarter was dominated by heightened geopolitical tensions, which drove a steep increase in energy prices and renewed inflationary concerns. Against this backdrop, investor sentiment became increasingly cautious, resulting in greater demand for safe-haven assets and renewed focus on downside risk management. The sharp movements in markets resulted in increased trading opportunities for the fund, allowing for the acquisition of attractively priced assets, coupled with increased protection in the portfolios.

Global equities generally declined during the period. Elevated energy costs contributed to rising inflation expectations, leading markets to price out anticipated Federal Reserve rate cuts and, at times, reassess the risk of further monetary tightening. This shift weighed on equity valuations, particularly within interest-rate-sensitive US growth and technology stocks. The recent market pullback, however, created an opportunity to narrow our long-standing underweight position by selectively adding exposure to pockets of the DM markets at more attractive valuation levels.

We trimmed our global bond exposure, reallocating capital toward selectively identified, attractively valued equity markets in order to enhance diversification and long-term return potential.

Early in the quarter, we upgraded emerging market equities from Neutral to Overweight. This was based on our long-standing concern over elevated US market valuations and the view that the US dollar is set for a cyclical decline. Following the outbreak of violence in the Middle East, while volatility remained elevated, emerging markets demonstrated relative resilience. Looking through the short-term noise, we believe emerging markets remain supported by more attractive valuations, a rotation towards value-oriented sectors, and favourable terms-of-trade dynamics for commodity-exporting economies, although this is likely to be accompanied by more pronounced short-term volatility.

Ahead of the recent Middle East conflict, we further increased our overweight position in Chinese equities. China's sustained investment in renewable energy, electric vehicles, and domestic power generation has meaningfully reduced its reliance on imported oil, helping to insulate the economy from recent oil price shocks and supply disruptions following the Iran conflict. At current valuation levels, China offers a compelling asymmetric return profile.

On the domestic front, we used the drop in equity markets to increase our allocation to South African equities. After a strong run in the past two years, the local market continues to trade at a discount relative to developed markets, although we recognise the probability of a similar quantum commodity run as in 2025, or a correction in SA Inc, similar to that seen in 2024, is lower.

Within fixed income, we continue to hold an overweight position in nominal bonds which we believe, despite more recent volatility, still offer room for capital appreciation over the longer term. We are actively monitoring this position closely as the conflict continues and may have a longer-term impact on inflation, but we have also reduced the size of our overweight to lock in some profits. We maintain our neutral allocation to inflation-linked bonds.

We maintained a neutral allocation to South African listed property. While the medium-term outlook continues to improve, near-term uncertainties persist. Nevertheless, the asset class offers an attractive income profile, with potential upside as economic and financial conditions normalise.

Overall, given the heightened uncertainty in markets leading to some panic selling, we used the volatility to acquire well priced assets. We also increased currency hedging in portfolios, where possible, as the direction of the currency became more erratic. At times like these, we continue to monitor for selective opportunities but remain cautious in the sizing of such opportunities.

Glossary Summary

Annualised performance: Annualised performance shows longer term performance rescaled to a one-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund since inception.

Information Ratio: The information ratio is used to indicate the excess return the portfolio delivers over its benchmark per unit of active risk adopted by the fund since inception.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Annualised Volatility: Returns a statistical measure of the degree to which an individual value in a probability distribution tends to vary from the population mean of the distribution. The annualised standard deviation shows how far away numbers on a list are from their averages and takes that number and multiplies it by the square root of the frequency. This statistic is annualised if the number for periods greater than one year.

CPU: Cents per unit, reflects the consideration in cents paid for a unit of participation in the Fund.

***Aggressive/ High Risk:** Generally, these portfolios hold more equity exposure than any other risk profiled portfolio therefore tend to carry higher volatility. Expected potential long-term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

***Moderate/ Medium Risk:** These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn, the expected volatility is higher than low risk portfolios but less than high risk portfolios. The probability of losses is higher than low risk portfolios, but less than high risk portfolios. Expected potential long-term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

The Management Company and Trustee are registered and approved under the Collective Investment Schemes Control Act (No.45 of 2002). Prescient is a member of the Association for Savings and Investments SA.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period.

This document is for information purposes only and does not constitute or form part of any offer to issue or sell or any solicitation of any offer to subscribe for or purchase any particular investments. Opinions expressed in this document may be changed without notice at any time after publication. We therefore disclaim any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable directly or indirectly to the use of or reliance upon the information.

There are risks involved in buying or selling any financial product.

Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Disclaimer for Fund specific risk

- 1. Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- 2. Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
- 3. Developing market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
- 4. Foreign investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
- 5. Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- 6. Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- 7. Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
- 8. Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
- 9. Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
- 10. Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
- 11. Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company
