

**Investment Objective**

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets.

**Risk Indicator Definition**

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets. In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: liquidity risk, market risk, operational risk, credit risk, interest rate risk and currency risk.

MARKET COMMENTARY

In March, the fund underperformed the index by 112bps, with the fund down 10% and the index down 9%. The underperformance in February was driven in large part by the first and second bites of the apple, region and sector, which hit performance by 101bps. Our large underweight in the US hurt performance as that geography benefited from its safe-haven status. The third bite of the apple, stock selection, hit performance by 22bps. We held more cash this month, around 7%, which had a marginal positive impact of 10bps. The Developed Property Index underperformed the S&P 500 this month because interest rates rose significantly on the back of higher oil prices, driving inflation expectations higher. We remain focused on investing in companies with high-quality assets, low debt, strong cashflows and good management.

March was a challenging month for property stocks, with all geographies deep in the red. The least negative performer was the US, down 6%, where we were most underweight. HK and Singapore REITs were tied in second place, down 8%, outperforming the overall property index, but weak in absolute terms given the ongoing Middle East tensions. The HK and Singapore developers, on the other hand, were down 13% and 15% respectively. We maintain our overweight in HK on attractive valuations and a positive fundamental turnaround, and our underweight in Singapore on the back of less attractive valuations and the potential for government intervention. The weakest performers were the Japanese developers, down 19%, while their REITs were down 9%. We remain underweight Japan given higher inflation, rising interest rates and stretched valuations. The UK was the second weakest, down 19%, but we remain overweight as the stocks remain attractively valued with strong cash flows. The EU was the third weakest, down 16%, which is our most overweight region currently, as valuations are attractive with healthy growth.

The US property sectors were all down except for data centres. Datacentres were up 1%, and we moved from neutral to overweight during the month on the back of detailed fundamental analysis. Lodging was second best, down 4%, where we have no exposure because of the lack of sustainable growth. Shopping centres were down 5%, where we are overweight because of the discrepancy between mall and shopping centre valuations. The rest of the sectors all underperformed the US index, with the weakest being storage, down 13%, where we are underweight on weak fundamentals. PSA, the biggest stock in the sector, acquired NSA, which drove PSA's stock price lower. Second weakest were net leases, down 9% on the back of higher interest rates. This is our most overweight sector, with long-term leases in a volatile environment and increased transaction activity, which should drive more external growth. Third weakest was malls, down 8%, after David Simon, the long-running CEO of SPG, passed away this month. We have no exposure to this sector. We are overweight industrial, also down 8%, as tariffs, trade routes and geopolitical tensions could impact some of their tenants negatively.

The best performing stocks in our portfolio for the month were US data centres, with Digital Realty and Equinix up 1-2% on the back of AI driving stronger demand, but supply struggling to catch up. At the opposite end of the spectrum, high-beta HK developer New World Development was down 26% as cash flow projections priced in higher interest rates on their debt. UK industrial stock Segro was the second weakest, down 25%, closely followed by German residential stock LEG Immobilien, down 22%. We believe in the long-term potential of all three, and we have not trimmed our positions in these stocks to adjust for the current environment.

The first quarter ended on a weaker note for equity markets as tensions remained high in the Middle East. We are currently assessing our US underweight and the sectors where we see value. We are defensively positioned in the US, and remain overweight the EU, the UK and HK.

*\*Commentary is based on USD returns, net of investment charges, as at close of US markets (16h00 EST) on the last trading day of the month. This may differ from ZAR returns, which are shown net of investment charges, as at 15h00 CAT on the last trading day of the month.*

### Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest Performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Sortino Ratio:** A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Total Expense Ratio (TER%):** The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

**Performance fee incl. in TER (%) PF (%):** The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

**Transaction Costs (TC%):** The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

**Total Investment Charges TIC (%) = TER (%) + TC (%):** The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

### Specific Risk

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives Risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) Risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment Risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest Rate Risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property Risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency Exchange Risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector Risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative Counterparty Risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity Risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity Investment Risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

### Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

### Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Copies of the Prospectus and the annual and half yearly reports of the Company" are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 49 Upper Mount Street, Dublin 2, Ireland or by visiting [www.prescient.ie](http://www.prescient.ie). Copies may also be obtained directly from Fairtree Asset Management (Pty) Ltd (the "Investment Manager")

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Regulation 28 is issued under the Pension Fund Act.
