

Investment Objective

The Fairtree Global Emerging Markets Prescient Fund is an actively managed global equity fund. The objective of the fund is to offer long term capital growth by investing in emerging equity markets or in companies that derive a significant portion of their revenue in emerging economies. The portfolio is constructed in a diversified manner and aims to provide returns above the index.

Investment Policy

The objective of the Fairtree Global Emerging Markets Prescient Fund is to provide investors with long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies. Our investment philosophy is to buy quality companies, that are growing earnings, at attractive valuations below intrinsic value. In order to achieve this objective, the portfolio uses a quantitative screening process, based on various factors, to identify the most attractive opportunities. Fundamental research is then performed to determine the inclusion and sizing of positions.

MARKET COMMENTARY

The fund returned -2.9% for the month, underperforming the benchmark by 1.45%. Global markets showed continued strength in August, with the MSCI ACWI Index returning 2.5% and the MSCI Emerging Markets Index increasing 1.6% (all in USD).

The US market climbed 2.4% for the month but experienced volatility, with a 6.5% sell-off in the first few days of the month on the back of weak employment data. Stronger corporate earnings and several rate cuts being priced in drove a recovery in the Index by month end. European shares rose 3.9% during the month as inflation in the area dropped to 2.2% year-over-year in August from 2.6% in July, thereby increasing the likelihood that the ECB will cut interest rates at the September meeting. The MSCI Japan index ended the month marginally higher, however, the Nikkei Index saw the second largest single-day drop in its history of 12.4% on 5 August. This turbulence was caused by the Bank of Japan raising interest rates to 0.25%, the highest level since 2008. This resulted in a sharp appreciation of the Yen and a subsequent reversal of the longstanding carry trade. Within Emerging markets, Malaysia, Thailand and Indonesia were the strongest performers, while Turkey and Mexico continue to underperform on the back of political concerns and local currency weakness, raising concerns of potential inflationary pressures ahead. Taiwan recovered 3.4% off last month's lows, while China was 1% higher, despite releasing economic data that showed a continued contraction in manufacturing PMIs. On a sector level, Financials was the strongest performing sector in the month, however, stocking picking detracted from relative performance. Healthcare and Communication services also performed well, and the fund's underweight holdings detracted from relative performance. The Information technology, Materials and Consumer discretionary sectors were the worst-performing sectors in the month, however, stock selection within Information technology added to relative performance.

Noteworthy portfolio actions over the month include partially switching the holding in Alibaba into a bigger position in Pinduoduo, while the holding in British American Tobacco and Motus were trimmed on the back of strong share price performance. The existing holdings in Samsung Electronics and Riyadh Bank were topped up, while a new position was initiated in SK Hynix on weakness. Notable contributors to fund performance were holdings in Prosus (+25 bps absolute and relative), Indofood (+15 bps absolute and relative) and Motus (+14 bps absolute and relative). Notable detractors from performance over the month came from Pinduoduo (-79 bps absolute, -50 bps relative), Samsung Electronics (-28 bps absolute, -24 bps relative) and Goldfields (-21 bps absolute, -16 bps relative). Pinduoduo released their second quarter result during the month, showing earnings beating expectations and growing 115% year-over-year. The share, however, sold off sharply on the back of management's commentary that growth will inevitably slow down and profitability trend lower as they continue to invest in their ecosystem. We were surprised by the market's reaction, as this is not the first time management has cautioned investors that the incredible growth and operational leverage will eventually slow down. We used the opportunity to increase the funds holding, as the business now trades on forward earnings below 7 times, with a strong balance sheet.

The fund's style and country positioning remain largely unchanged, with Kazakhstan being the largest overweight through positions in Kaspi and Halyk. The fund remains underweight in Taiwan and India, where both markets continue to trade on elevated valuations compared to their history and Emerging market peers.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Fund will mainly invest in large and mid cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
