

# Iconic Asymmetry Fund

## INVESTMENT OBJECTIVE

The fund aims to deliver stable, risk-adjusted returns through a diversified portfolio of top-performing assets. By employing a multi-strategy approach and selecting expert hedge fund managers, it targets consistent absolute returns with low market correlation. Designed for high-net-worth individuals and institutions, it prioritizes risk management, diversification, and resilience, offering superior, sustainable returns across market cycles. The fund has adhered to its stated objectives....

5 years  
Moderate Risk

A Moderate Risk investment profile refers to an investor who is willing to accept a relatively higher level of risk in exchange for potentially higher returns. Investors with this profile usually have a moderate to long investment horizon and can tolerate market fluctuations and temporary losses in pursuit of capital growth....

## FUND COMMENTARY

The Iconic Asymmetry Fund – Class A USD advanced 1.05% in December, lifting the 2025 returns to 12.74%. This solid performance reflects the strength of our diversified underlying managers, who navigated a dynamic market environment marked by strong performance in tech, commodities, banking, and infrastructure. The fund is well positioned geographically and sector-wise to capture 2026's cyclical upswing while mitigating volatility. The majority of the underlying manager's delivered standout results, underscoring the fund's asymmetric risk-return profile. Our best underlying manager for the month and year was L1 Capital Offshore Feeder Fund which outperformed the benchmarks in 2025. L1 Capital Long Short Offshore Feeder Fund strong performance was driven by long positions in Mineral Resources, Flight Centre, and gold equities, benefiting from rising commodity prices and positive company news. L1 Capital has contributed 52bps to the Dec 25 performance. Steyn Capital Global Emerging Markets Fund was another key contributor to the fund's performance and contributed 19bps to the fund performance. Steyn benefited from strong performance in Chinese, Korean, and Taiwanese technology stocks, driven by the AI theme. Argonaut Absolute Return Fund delivered positive returns outperforming pan-European benchmarks via concentrated long/short positions, while Acasta Offshore Class D Shares rose 0.71% to cap the year at 8.86% on natural resources, credit wins, and strong convertibles in Vizsla Silver and Endeavour Silver. Polar Star Fund Limited was the only detractor in December while it still posted a year-to-date of 3.2%. The fund rebalanced its holdings to the target weightings over the quarter. We believe that the eight underlying managers position the fund well in this dynamic macro-economic environment with policy uncertainties, a huge pick-up in productivity in the US and geopolitical tensions.

## GLOSSARY

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Max Drawdown** is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Max drawdown is an indicator of downside risk over a specified time period.

**Sharpe Ratio** is a measure for calculating risk adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk.

**Fund of Fund:** A portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

**Liquidity Risk:** Refers to the possibility that an investor may not be able to invest or disinvest when they want to. This may occur during a period of adverse market trading conditions where the Manager may not be able to buy or sell the Fund's investments because opportunities to do so are limited.

**Net Asset Value (NAV):** The net asset value represents the assets of a Fund less its liabilities.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The CIS may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Alpha Asset Management International Limited by or before 16h00 (Mauritius Time), to be transacted at the net asset value price for a specific value date. Where all required documentation is not received before the stated cut-off time, Alpha Asset Management International Limited shall not be obliged to transact at the net asset value price as agreed to. Funds are priced after month- end (around the 15th Business Day of the month).

Performance has been calculated using net NAV to NAV numbers. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Performance Fees are calculated based on the HWM being the highest NAV achieved and no hurdle rate is applicable.

The **Iconic Asymmetry Fund** is registered and approved under section 65 of CISCA.
