

# PRESCIENT GLOBAL BALANCED FEEDER FUND (A2)

## MINIMUM DISCLOSURE DOCUMENT & GENERAL INVESTOR REPORT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve long term capital growth appreciation over a full market cycle by maintaining meaningful exposure to growth assets like equities, with returns converted to rands.

### INVESTMENT PROCESS

The Fund invests in a diversified portfolio of global equity securities, debt and debt-related securities, money market instruments and global currencies. The Fund can invest directly or indirectly (through the use of Regulated Funds or derivatives) in these asset classes.

### WHO SHOULD INVEST

Investors seeking capital growth and a hedge against Rand depreciation by having exposure to a diversified mix of offshore assets. The Fund is suitable for investors with a medium to long-term investment horizon who wishes to invest in a rand denominated fund.

### RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

## FUND COMMENTARY

March saw further political pressure being imposed by the United States against its trading partners and the announcement by the US of a reciprocal tariff system against trading partners, such as the EU, which have high trade barriers in place with the US. While the stated aim of the tariff system is additional income and onshoring of jobs into the US, the short term effect is likely a partial increase in inflation as companies pass on the increased tariff costs directly to consumers, along with increases in market volatility.

Globally, China's central bank (PBOC) aims to maintain yuan stability and manage financial risks, particularly due to external tariffs. The PBOC's actions align with China's shift in monetary policy from "prudent" to "moderately loose" for 2025, focusing on stimulating consumption. The supportive monetary policy also aims to mitigate external pressures on exports, especially following the US decision to increase tariffs on Chinese goods by 20%. However at their first Quarterly meeting of 2025, China's central bank made the decision to hold benchmark lending rates steady for the fifth straight month in March, matching market expectations.

The Bank of England also kept its key interest rate unchanged at 4.5% and emphasised the need for caution due to persistent inflation, while the European Central Bank (ECB) decided to cut key interest rates by 25 basis points from 2.75% to 2.5% at the March policy meeting. This was driven by weak economic prospects in the Eurozone and the ongoing disinflationary trend.

In March, the MSCI World Index fell by -4.64%, while its emerging market counterpart managed a modest gain of 0.38%. Both the Nasdaq Composite and S&P500 Index continued their downward trend, posting monthly returns of -8.21% and -5.75%, respectively. The Chinese equity market showed some resilience, with the Shanghai SE Composite Index rising by +0.45% and the Hang Seng Composite Index gaining +1.22%. In the UK, the FTSE 100 Index ended the month down by -2.58%.

The Fund currently holds a moderately negative view towards developed equity markets and a neutral stance on emerging market equity and US Treasuries.

The Fund was negative for the month, largely due to poor global equity performance.

## GLOSSARY

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

## Fund Specific Risks

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 11:00 (SA) for money market funds and the Prescient Optimised Income Fund and by or before 13:00 for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
