FUND COMMENTARY

A decent rally in global markets took place as November was nearing a conclusion. Prior to this, markets flip flopped with no clear direction as the US tech sector initially sold off and then recovered strongly when bargain hunting entered markets and the US Federal Reserve hinted that US interest rates were near the neutral rate. The tech heavy Nasdaq index, which was down over -5% at one point, ended 0.34% up in November, whilst the S&P500 index rose by 1.79% over the same period. Brexit negotiations continued to weigh on UK and the EU. After eventually managing to strike a deal, UK Prime Minister Theresa May now faces a Herculean task of getting the deal through the House of Commons, who are set to vote on the agreement on the 11th of December. European markets hence struggled with the DAX and FTSE100 indices giving back -1.66% and -2.07% respectively. Amidst the geopolitical uncertainty, the MSCI Emerging Market index (+4.06%) outperformed the MSCI World index (+0.96%). On the home front, the South African Reserve Bank hiked interest rates by 0.25%, which caught markets off guard to some degree considering the desperate need for growth domestically. Meanwhile, another cabinet reshuffle took place as tempers flared at the Zondo commission of state capture, which hints at a bumpy ride till next year's national election. The JSE All Share index decoupled from global markets by losing -3.17% in what was a tough month. Bonds rallied with the All Bond index adding 3.87% in November. However, Brent crude oil was the laggard as severe selling pressure, on the back of a diminished global growth outlook, saw a -20.75% collapse in price to end at USD59.14/bbl. The option structure has been left unchanged in November. The fund maintained a conservative effective exposure to equities (c. 16%) throughout the recent sell-off. Should weakness in the equity market persist, we will be on the lookout for opportunities to increase upside exposure.

Contributors to performance: Last month saw the SA yield curve flattening, which aided the Fund's long-dated bond holding. The preference share exposure in the Fund also made a positive contribution over the period

Detractor from performance: Equities, property and ILB's detracted from performance. ZAR strength proved to be a headwind for the rand-hedge heavy local equity index, while 25bps interest rate hike that was delivered by the SARB put pressure of local property and ILB's.

PRESCIENT POSITIVE RETURN QUANTPLUS[®] FUND

GLOSSARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Sensitivity Analysis: Shows the expected return of the Fund for the Performance Projection Period (label on vertical axis), at the end of the Performance Projection Period based on a range of potential moves in the equity market from this month-end to the end of the Performance Projection Period.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
