

PRESCIENT ABSOLUTE DEFENSIVE FUND

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to return CPI + 4% per annum through a full market cycle while providing stability by aiming to protect capital over any rolling 12 month period.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds and inflation-linked bonds, property, preference and ordinary shares, derivatives and unlisted instruments to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation and exposure equities.

WHO SHOULD INVEST

Investors seeking real returns coupled with a stable and attractive income yield via significant exposure to the South African interest bearing markets. Although the Fund's mandate allows investment up to 40% in equities, it is expected to have lower actual exposure on average. This Fund is suitable to investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure or in the case of bond funds, longer duration bond exposure, resulting in some capital volatility over the shorter term. They are managed in such a manner that the probability of capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 3% - 4% above inflation before tax over the long term.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)			RISK AND FUND STATS	
	Fund	Benchmark	Since inception (p.a.)	
1 year	4.39	4.08	Alpha	0.05%
Since incep.	6.92	6.87	Sharpe Ratio	0.08
Highest rolling 1 year	7.29	8.39	Standard Deviation	3.06%
Lowest rolling 1 year	1.84	2.69	Max Drawdown	-1.23%
			% Positive Months	68.42%

FUND COMMENTARY

The recovery in risky assets that began in December 2018 continued apace in January. Fears of excessive monetary policy tightening by the US Federal Reserve have receded as the central bank turned more dovish in its latest Federal Open Market Committee (FOMC) meeting. Benign inflationary pressures have afforded the policymakers some room to pause rate hikes while they assess the impact of their recent hikes on financial markets and the broader real economy. The bank's FOMC signalled flexibility with regards to future path of the fed funds rate and, most notably, the reduction of the size of the balance sheet. Interestingly, Fed Fund futures are now pricing in policy rate cuts in 2020. A gentler tone by the Fed, coupled with optimism around US/China trade negotiations triggered some risk seeking behaviour by market participants as the two biggest overhangs to risk sentiment in 2018 seem to have dissipated.

Locally, the South African Reserve Bank's Monetary Policy Committee (MPC) kept the repo rate on hold (currently 6.75%) in a unanimous vote as the stronger Rand and weaker oil price improved the inflation outlook. The MPC also lowered their inflation forecast for 2019 by 70 basis points to 4.8% (previously 5.5%). Taken together with the dovish tone of the statement in general, further rate hikes appear to be less of a possibility in the near term. Focus will now turn to President Ramaphosa's State of Nation Address and Minister Mboweni's budget speech as we continue searching for clues regarding the momentum and political will behind implementation of structural policy reforms that will see South Africa escape the low growth trap it finds itself in.

Contributors to performance:

Local bonds, local equities and property all contributed strongly to performance. Risky assets such as emerging markets stocks and bonds outperformed as a more dovish Fed supported risk-on sentiment.

Detractors from performance:

All asset classes that the fund is invested in posted positive returns over the month.

PRESCIENT ABSOLUTE DEFENSIVE FUND

GLOSSARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
