

2IP INCOME PRESCIENT FUND OF FUNDS (A1)

MINIMUM DISCLOSURE DOCUMENT &
GENERAL INVESTOR REPORT
30 April 2026

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve a return in excess of the STeFi composite index over the short term while also achieving a return of approximating CPI+2% over a full cycle. The Fund aims to limit capital losses over the short term.

INVESTMENT PROCESS

The funds will primarily invest in local collective investment schemes (CIS) and exchange-traded funds (ETFs) but may also include foreign CISs and ETFs. The underlying funds will allocate to a range of asset classes including money market, bonds, property, preference shares and inflation-linked bonds to meet the investment objectives.

WHO SHOULD INVEST

Investors seeking returns in excess of the typical Money Market Fund and seeking to reduce their risk of being exposed to a single asset manager.

RISK INDICATOR DEFINITION

These portfolios typically exhibit lower volatility and potential for capital losses due to negligible exposure to equities and lower exposure to offshore markets where currency fluctuations may result in capital losses.

Fees will be available one year after the fund's inception

*Other fees includes underlying fee (where applicable): Audit Fees, Custody Fees, Trustee Fees and VAT

GLOSSARY

Fund of Funds: A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

FUND SPECIFIC RISKS

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

INFORMATION DISCLOSURE

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

QUARTERLY FUND COMMENTARY

The first quarter of 2026 was marked by significant volatility across global markets, driven by geopolitical tensions, shifting monetary policy expectations, and sharp movements in commodity prices. Global markets were unsettled by the escalation of conflict in the Middle East, which disrupted oil and gas supply and caused Brent crude prices to surge. This energy shock intensified inflation concerns and shifted investor focus toward rising price pressures. As a result, both equities and bonds declined, while traditional safe-haven assets such as gold initially strengthened before weakening alongside a firmer US dollar. Central banks adopted a cautious stance amid this uncertainty. The US Federal Reserve, European Central Bank, Bank of England, and Bank of Japan all held rates steady, but market expectations shifted meaningfully. Investors moved from anticipating rate cuts to pricing in potential rate hikes as inflation risks became more pronounced. Global asset performance reflected this challenging environment. The MSCI All Country World Index declined by 3.2%, while developed markets (MSCI World) fell 3.6% and emerging markets (MSCI EM) proved more resilient at -0.2%. Global bonds, as measured by the Bloomberg Global Aggregate Bond Index, declined 1.1%. Property provided a modest positive return of 0.9%. In the United States, equity markets ended lower, with the S&P 500 down 4.3%, the Dow Jones declining 3.2%, and the NASDAQ falling 7.0%, reflecting a rotation away from mega-cap technology stocks and concerns around AI-related valuations. In Europe, the DAX dropped 9.3% and the CAC 40 fell 5.8%, while the UK's FTSE 100 stood out with a gain of 1.4%. Japan's Nikkei 225 rose 0.7%, outperforming most developed markets, while China's Hang Seng declined 3.7%. South African markets followed global trends. The FTSE/JSE All Share Index ended the quarter down 0.6%, with strength in resources (+7.2%) offset by declines in industrials (-8.4%), property (-5.3%), and financials (-0.2%). Bonds weakened significantly, with the All Bond Index falling 3.4%, while inflation-linked bonds returned -1.1%. Cash remained stable, delivering 1.7%. Overall, commodities were the defining feature of the quarter. Brent crude surged to deliver a return of 94.5%, while gold rose 5.9%, zinc 3.9%, and silver 2.6%. The quarter highlighted the sensitivity of markets to geopolitical shocks and inflation dynamics, reinforcing a cautious investor environment.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested. This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
