

Investment Objective

The Fairtree Global Emerging Markets Prescient Feeder Fund is an actively managed global equity fund. The objective of the fund is to offer long term capital growth by investing in emerging equity markets or in companies that derive a significant portion of their revenue in emerging economies. The portfolio is constructed in a diversified manner and aims to provide returns above the index.

Investment Policy

The objective of the Fairtree Global Emerging Markets Prescient Feeder Fund is to provide investors with long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies. Our investment philosophy is to buy quality companies, that are growing earnings, at attractive valuations below intrinsic value. In order to achieve this objective, the portfolio uses a quantitative screening process, based on various factors, to identify the most attractive opportunities. Fundamental research is then performed to determine the inclusion and sizing of positions.

MARKET COMMENTARY

The fund returned 4.6% for the month in Rand, underperforming the benchmark by 0.5. The MSCI Emerging Markets Index rose 8.85% in USD over the month. Within emerging markets, South Korea and Turkey posted strong gains of 25.9% and 23.7%, while India and Indonesia were the main detractors, declining 5.1% and 5.6% respectively (all figures in USD).

US equities edged higher in January, with markets rising 1.27%, as investors digested steady inflation data alongside further signs of slowing labour market momentum. Inflation figures released during the month showed headline CPI rising 2.7% year on year in December, while core inflation remained contained at 2.6%. US companies added fewer jobs than anticipated in January, signalling a continued moderation in labour market conditions at the start of the year. Private sector payrolls rose by 22 000, following a downward revision to the prior month. Against this backdrop, the Federal Reserve left policy rates unchanged at its January meeting, maintaining a cautious stance as policymakers assessed the balance between easing inflation and a cooling labour market. European equity markets delivered solid gains in January, rising 4.45%, supported by easing inflation pressures and stable monetary policy expectations. Eurozone headline inflation softened further in January, falling to 1.7% year on year, below the ECB's 2% target, while core inflation eased to 2.2%, reflecting broader normalisation in price pressures. Against this backdrop, the European Central Bank kept its key interest rates unchanged, maintaining the deposit rate at 2% and signalling confidence that inflation will stabilise around the target over the medium term despite the recent dip.

Emerging markets delivered a strong start to the year, with the MSCI Emerging Markets Index rising 8.85% in January with pronounced divergence on a country level. South Korea and Turkey were the standout performers, advancing 25.9% and 23.7% respectively. In South Korea, equities rebounded sharply, supported by strength in technology and semiconductor stocks alongside the government's market support and corporate value-up programme, which helped improve investor confidence and capital market sentiment. Turkish equities also posted outsized gains, reflecting improved investor sentiment and continued capital inflows. By contrast, India and Indonesia were the main detractors, declining 5.1% and 5.6% respectively, as investors reassessed near-term growth and policy dynamics. Overall, January performance highlighted the continued importance of country specific drivers within emerging markets.

On a sector level, Information Technology was the best performing sectors over the month, where the fund's underweight detracted from relative performance. The fund's overweight holdings in Materials & Financials added to relative performance, while stock picking in Communication Services added to relative performance. Notable portfolio actions during January included initiating a new position in Polycab and Wistron, while existing positions in Tencent, Alibaba and Northam Platinum were topped up at attractive levels.

Notable contributors to fund performance were positions in Samsung (+99bps absolute and -29bps relative), TSMC (+98bps absolute and -28bps relative) and SK Hynix (+50bps absolute and -34bps relative). Notable detractors from performance over the month came from Naspers (-45bps absolute and -40bps relative), Trip.com (-20bps absolute and -14bps relative) and Kaspi (-19bps absolute and relative).

The fund is overweight in Kazakhstan and South Africa, where we continue to find compelling bottom-up opportunities. Conversely, the fund remains underweight India, Taiwan and China, with India and Taiwan continuing to trade at elevated valuations relative to broader emerging market peers.

The Fairtree Global Emerging Markets UCITS Fund was successfully launched on 1 December 2025, providing an offshore entry point for investors. The existing Fairtree Global Emerging Markets Prescient Fund will convert into a Rand-based Feeder Fund during February 2026.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Fund will mainly invest in large and mid cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
