

PRESCIENT BALANCED FUND (A2)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

INVESTMENT PROCESS

The Fund invests across a range of assets including equities and interest bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation, but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)				RISK AND FUND STATS	
	Fund	Benchmark	Category Avg	Since inception (p.a.)

FUND COMMENTARY

Investors are weighing concerns about the health of the US economy against stronger expectations for early Federal Reserve policy easing. Our Prescient Economic Indicator (PEI), a measure that provides us with valuable insight into economic conditions has shown soft signs of a slowdown in May, largely weighed down by deteriorating economic subcomponents of the index. US data indicates that factory activity shrank at a faster pace as output came close to stagnating and the measure of orders dropped by the most in nearly two years. The softer data in May led US treasury yields lower. The US Treasury Index gained 1.5% in May. Simultaneously we saw the dollar weaken more than 1% against its major peers, and its first monthly decline of 2024.

Euro-area inflation accelerated more than anticipated, further clouding the outlook for ECB interest rates after this week's planned cut. Consumer prices rose 2.6% from a year ago, up from 2.4% in April, according to Eurostat. A measure stripping out volatile components like food and energy also surpassed expectations. They're nevertheless set to reduce the deposit rate from its current record high of 4% in the first week of June. Moving before either the Fed or the Bank of England.

The International Monetary Fund now expects China's economy to grow 5% this year, raising its forecast from 4.6% a few weeks ago to reflect a strong expansion at the start of 2024 and additional support from the government. The IMF said it had revised up both its 2024 and 2025 GDP targets by 0.4% but warned that growth in China would slow to 3.3% by 2029 due to an ageing population and slower expansion in productivity. The IMF has called on Beijing to provide more monetary and fiscal support, including further steps to resolve the housing crisis, which has persisted despite repeated efforts by authorities to put a floor under prices and boost demand.

Commodities mostly moved higher in May, with gold reaching a new intramonth high. Bullion surpassed \$2,400 per ounce as Central Banks continued to diversify their reserves and geopolitical tensions in the Middle East remained elevated. Gold posted a monthly gain of 1.8%, outperforming the Bloomberg Industrial Metals Index, which added 1.4%. Silver surged nearly 16%, bringing its total gain since February to 34.1%. In contrast, oil prices fell by more than 7%.

In South Africa, Africa's largest economy by GDP, the ruling African National Congress (ANC) has received only 40.2% of votes in its national election, well short of a majority. For the first time since the end of apartheid in 1994, the once-dominant party will need to make a deal with other parties to form a coalition government. The Democratic Alliance (DA), the main opposition party, received the second-highest number of votes (21.8%) followed by the MK party (14.6%) and EFF (9.5%).

Meanwhile, South Africa's economy shrank in the first quarter as a pickup in rotational power cuts and weak demand weighed heavily on the mining, manufacturing and construction sectors. Gross domestic product contracted 0.1% in the three months through March, compared with revised growth of 0.3% in the prior quarter. The lackluster performance is likely to continue in the second quarter, as early economic indicators show election uncertainty sapped demand in sectors from manufacturing to retail.

Global equities gained in May, with the developed market regions outperforming their emerging counterparts. The MSCI World Total Return Index rallied 4.2%, ahead of the Emerging Market Index, which added just 0.3%. US Stocks rebounded from their April slump as weaker than expected economic data and positive momentum in the tech sector boosted. The S&P500 gained nearly 5%, while the tech heavy Nasdaq surged 6.9%. European shares shared in the gains, with the STXE 600 adding 3.3%. Japan's Nikkei added just 0.2%, while in China, the Shanghai Composite lost 0.6% and the Hong Kong's Hang Seng Index rose 2.1%. Locally, the All Share Total Return Index added 0.8%, while listed property gained 0.16%, local bonds +0.75% and ILB's lost -0.75%. The Rand ended the month flat.

Contributors to performance: Developed Market Equity was the strongest contributor to performance over the month.

Detractors from performance: No detractors to performance.

PRESCIENT BALANCED FUND (A2)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

PRESCIENT BALANCED FUND (A2)

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
