Investment	Objective
------------	-----------

The Fund is Section 65 approved and is suitable for investors with a long term time horizon that are able to withstand higher than average volatility in the price of the fund over shorter time periods.

Investment Strategy

The fund is an actively managed, concentrated portfolio of global equities that aims to outperform the MSCI All Country World Index (ACWI) over the long term. The Fund invests in company shares, selected bottom-up based on fundamental research and valuation and is fully invested at all times.

Country Exposure

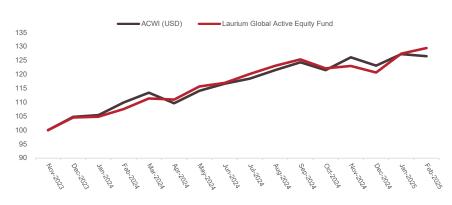

Top 10 Equity Holdings as a % of Fund size				
Microsoft Corp	4.9%	Bank of America Corp	3.3%	
Quanta Services Inc	4.1%	Broadcom Inc	3.2%	
Mastercard Inc	4.0%	Heineken NV	3.2%	
AstraZeneca PLC	3.7%	UnitedHealth Group Inc	3.1%	
Arca Continental SAB de CV	3.7%	JPMorgan Chase & Co	3.0%	

Asset Allocation	
Asset Class	Total
Equity	97.4%
Cash	2.6%
Total	100.0%

Growth of \$100 investment at inception (cumulative)

The investment performance shown is for illustrative purposes only. Investment performance is calculated by taking the actual initial fees and all ongoing fees into account for the amount shown. Income is reinvested on the reinvestment date.

Commentary

A highly volatile geopolitical backdrop created significant tension for investors in the month of February. US President Trump continued to follow through on many of his pre-election promises with a high degree of zeal but also frustratingly regular contradiction. US economic policy defined by tariffs remains the base case for investors and companies, but the actual levels and timelines for their imposition remained highly uncertain. Similarly, US foreign policy defined by transactional benefits and deal-making ("what's in this for the US?") appear to have scuppered hopes for a return to the old days of Pax Americana. As a result, business confidence ebbed, investor confidence ebbed, and markets began to unwind the more bullish early trades from the Trump win. Bitcoin sagged, gold was strong, and US stocks underperformed (especially smaller caps, the Russell 2000 losing over 5% for the month).

US technology companies had generally reported strong and market-beating earnings for their recent periods, but the Nasdaq shrugged off this news and lost 2.7% for the month, as investors fretted over potential Chinese competition and AI monetisation risks. Global equity returns were rescued by a surge in support for European stocks, notably EU banks and financials which benefited from returning capital and cheap relative valuations. In aggregate the MSCI ACWI Index returned +0.5% for the period.

Disclaimer

Authorisation of the Laurium Global Active Equity Fund by the Central Bank of Ireland is not an endorsement or guarantee nor is the Central Bank of Ireland responsible for the contents of the prospectus. Authorisation by the Central Bank of Ireland shall not constitute a warranty as to the performance of the Laurium Global Active Equity Fund and the Central Bank of Ireland shall not be liable for the performance or default of the [ICAV]. Shares in the Laurium Global Active Equity Fund and the Central Bank of Ireland shall not be liable for the performance or default of the [ICAV]. Shares in the Laurium Global Active Equity Fund are subject to market fluctuations and the risks inherent in all investments and there can be no assurance that an investment will retain its value or that appreciation will occur. The price of shares and the income from shares can go down as well as up and investors may not realize the value of their initial investment. Accordingly, an investment in the Laurium Global Active Equity Fund should be viewed as a medium to long-term investment. Past performance may not be a reliable guide to future performance. Prospective investors should consult a stockbroker, bank manager, solicitor, accountant, financial adviser or their professional advisers accordingly. Copies of the prospectus and the Key Investor Information Documents are available from [Investment Manager / Manager / registered office]. Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed

The portfolio has adhered to its policy objective.

Portfolio Managers

Rob Oellermann

Rob joined Laurium in December 2020 as a portfolio manager. Prior to this he was a founding member of Tantalum Capital where he was CIO. He was the portfolio manager for the equity and multi-asset portfolios under both long only and hedge fund mandates. From 1997 to 2005 Rob was at Coronation Fund Managers. Initially, he was co-manager and then manager of the Coronation Consumer Growth Fund. He spent 18 months in the Dublin and London offices of CFM, analysing European equities and managing the Coronation European Growth Fund. After his return to the Cape Town office in 2001 he was appointed as Head of Research, managed Coronation's segregated institutional balanced portfolios and was direct portfolio manager for institutional equity mandates. Rob started his career in 1994 at Allan Gray as a quantitative and fundamental equity analyst.

Glossary

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

High Water Mark: The highest level of performance achieved over a specified period.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request

Fund Specific Risks

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality it vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic/sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow. Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by PFS (Ireland) by or before 10:00 am (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund is priced at 5pm (New York Time).

Risk Profiles

Conservative: Generally low risk portfolios have minimal equity exposure or no equity exposure, resulting in far less volatility than a more aggressive mandated portfolio and in turn the probability of capital loss (permanent/temporary) is less likely. However, expected potential long term investment returns could be lower over the medium to long term Moderate | Moderate-Aggressive: These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than low risk portfolios, but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

Aggressive: Generally these portfolios hold more equity exposure than any other risk profiled portfolio therefore tend to carry higher volatility. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

Total Expense Ratio

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.
