

FUND OBJECTIVE & STRATEGY

The investment objective of the Fund is to provide long term capital appreciation and income growth through investment in a concentrated portfolio of assets. The fund is primarily exposed to a focused portfolio of developed market equities. The fund is managed on the basis of the long term ownership of assets and has a bias towards high quality ideas. Investors with a time horizon of three to five years are ideally suited to this fund.

WHO SHOULD INVEST

The Fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

The value of your investments can fall. You can receive back less than you invested. These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses.

MONTHLY COMMENTARY

The ClucasGray Global Fund had a strong start to the year, advancing +3.5% and outpacing the Morningstar Aggressive Allocation peer group's +3.0% gain. Global markets were broadly positive, with the MSCI All Country World Index rising +3.3%.

Equities had a tepid start to the month, suppressed by US bond yields which rose to cycle highs following a more hawkish outlook from the Federal Reserve in December. Gains, however, accelerated in the second half of January, supported by robust quarterly financial results, with over 75% of S&P500 companies reporting to date coming in ahead of market estimates. US markets (S&P500 +2.7%) trailed global peers, held back by technology-related sectors (Nasdaq +1.6%) where valuations had become elevated. European markets (Stoxx 50 +8.7%) outperformed significantly as investors rotated out of US shares into cheaper EU stocks, which still have the benefit of falling domestic interest rates.

US manufacturing (PMI 50.9) expanded for the first time in over two years in January after reaching a bottom in the fourth quarter of last year, while European manufacturing remains mired in recession (PMI 46.6). Through most of last year both economies found support in the larger services sector, which continued to expand in January in both the US (PMI 52.8) and EU (PMI 51.3). The US labour market continued to show resilience in January - monthly payroll additions decelerated to +143 000, however, the unemployment rate ticked down slightly to 4.0% and wage increases were strong at +4.1%.

The Fund's largest positive performance came from internet giant, Meta Platforms (+17.7%), which reported robust revenue growth of +21%. The company continues to make material investments in AI infrastructure which it believes will translate into continued strong growth rates. Thermo Fisher (+14.9%) also rallied sharply as its results showed that a growth acceleration in the life sciences market is underway. Negative performances came from Electronic Arts (-16.0%), which provided a more challenging outlook for its key Global Football game, and Nvidia (-10.6%), which traded lower after news of emerging, low-cost Chinese AI models led investors to question demand for the company's high-powered AI chips.

No new positions were added during the month, however, the Fund continued to increase the position in diabetes and weight-loss drug maker, Novo Nordisk, with the company reporting stellar results and a strong outlook. The Fund sold the last remaining portion of its energy position during the month.

At the end of the month the Fund had an underlying exposure to equities of 94.4%, and 5.6% cash.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient Fund Services (Ireland) by or before 10h00 (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient Funds Services (Ireland) shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at 17h00 (New York Time). Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Months: The percentage of months since inception where the Fund has delivered positive returns.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
