

Investment Objective & Strategy

The **WealthStrat Growth Prescient Fund of Funds** will aim to deliver moderate to high long term total return. The manager shall have limited flexibility in terms of asset allocation and shall not be precluded from continually varying the underlying exposure to both local and offshore assets. The Fund will employ asset and limited geographical allocations to reflect changing economic and market conditions to maximise returns over the long term, the **WealthStrat Growth Prescient Fund of Funds** will, apart from assets in liquid form, consist solely of participatory interest in Collective Investment Schemes which will invest in a diversified mix of assets, including but not limited to equities, property, preference shares, money market and fixed interest instruments. The equity allocation will be managed at a maximum effective exposure, including offshore equity, up to 75%. The underlying collective investment schemes are permitted to invest in listed and unlisted financial instruments in line with conditions as determined by legislation from time to time. The underlying portfolios will predominantly invest in South African markets but is however permitted to include investments in offshore jurisdictions subject to the investment conditions determined by legislation from time to time.

Quarterly Fund Commentary

Moderately aggressive investors generated strong returns in the second quarter of 2024, as most local risk assets recorded strong performance. Strong returns from local equities acted as a tailwind to the performance of the portfolio over the quarter. On the other hand, the firmer rand acted as a headwind to the performance of global asset classes over the quarter.

The WealthStrat Growth Prescient Fund of Funds returned +4.1% for the quarter and has generated a return of +10.7% over the past year.

The portfolio remains diversified in terms of its exposure to different asset classes, and we remain confident in its ability to deliver inflation-beating returns over the long term, independent of the market environment.

Asset Allocation

Local equities and in particular "SA Inc." stocks moved higher this quarter, as a relief rally drove risk assets higher. This was largely driven by the Financials (+17.8%) sector, which rebounded strongly from the poor performance recorded in the first quarter of 2024. Large banking and insurance counters produced double digit returns on the back of general strength in the sector. Capitec (+27.4%), Firststrand (+24.6%), Sanlam (+23.5%) and Standard Bank (+18.5%) were among the best performing counters in the sector over the quarter. Industrials (+5.2%) ended the quarter in positive territory, largely driven higher by "SA Inc." shares and in particular food and apparel retailers, which rebounded strongly. On the other hand, rand hedges and companies that earn a large portion of their revenue outside of South Africa produced poor returns over the quarter. Resources (+3.6%) ended the quarter higher, however, the sector lagged the broad market rebound. The performance was largely driven by diversified miners as well as gold and platinum counters including Anglo American PLC (+23.9%), Impala Platinum (+15.9%) and Anglo Gold Ashanti (+8.8%). Global equities produced mixed returns this quarter, with stocks related to artificial intelligence (AI) leading the way higher. The US moved higher this quarter, largely driven by stocks related to AI. Turning to other developed market regions, it was a mixed picture, with Europe (in particular Germany) and Japan producing negative returns, whilst on the other hand, the UK posted a strong return. Local bonds make up the next largest allocation within the Portfolio. This includes allocations to corporate, government and inflation-linked bonds. Short dated nominal bonds held up well over the quarter and produced a stable performance, however, they lagged the performance of longer duration peers. Longer-dated instruments ended the quarter higher, producing their second-best Q2 return in 22 years, ahead of global peers. Yields moved lower this quarter (and prices higher), as bonds were beneficiaries of foreign inflows on the back of the SA election risk subsiding. Local cash allocations continue to deliver positive returns this quarter. Offshore bond and cash allocations detracted from performance on the back of news from the major central banks that interest rate cuts will be later and shallower than previously expected, which caused yields to move higher, providing a headwind for fixed income asset classes. The firm rand acted as a headwind to the performance of offshore allocations. A small allocation to local listed property contributed to performance this quarter, as the property sector continued its strong run, driven by SA focused property counters including index heavyweights Growthpoint (+13.9%) and Redefine (+7.5%). The fund's asset allocation is broadly similar to the previous quarter.

Fund Selection

The contribution from fund selection was mostly positive for the quarter.

Nedgroup Investments Global Emerging Markets Equity FF delivered strong performance in a quarter that was negative for global equities. Global emerging markets outperformed developed markets during the quarter, and the fund ended the quarter ahead of its benchmark and peer group. Stock selection was a positive contributor over the quarter, with overweight positions in JSW Energy (+39.4%), SK Hynix (+26.4%), Varun Beverages (+16.6%) and Taiwan Semiconductor Manufacturing Co. (+23.3%) acting as the main contributors to the positive relative performance.

Ninety One Global Franchise FF delivered negative absolute performance and lagged peers slightly over the quarter. The fund struggled to keep up with the performance of the market and peers over the quarter, with recent moves in the equity market favouring the momentum, growth and cyclicality factors, rather than those managers that favour a quality approach. The largest contributors to performance over the quarter were allocations to Alphabet (+20.7%), Booking Holdings (+9.4%) and ASML (+7.4%). On the other hand, allocations to Visa (-5.8%), Align Technology (-26.4%) and Icon PLC (-6.7%) were the largest detractors.

10X S&P SA Top 50 produced a strong first quartile return, over the quarter, following the broad market strength. Exposure to SA resources and SA financials contributed to the performance over the quarter. On the other hand, exposure to rand hedges and gold shares detracted from performance. Among the outperformers this quarter, the fund's overweight position to Anglo American (+23.7%) as well as the fund's exposure to Firststrand (+24.6%), Capitec (+27.3%) and Standard Bank (+18.5%) contributed to performance this quarter. Among the detractors, the fund's positions in Gold Fields (-10.0%), Bidcorp (-8.0%), MTN (-5.7%) and Anheuser-Busch InBev (-6.9%) detracted from performance this quarter.

There were no changes made to the underlying funds in the portfolio in the second quarter.

Summary

We are pleased that the portfolio managed to generate a strong return over the second quarter, in a particularly strong local environment. The portfolio continues to be allocated to a diverse range of attractively priced local and global asset classes and we are confident that it will be able to deliver on its objective over the long term. The fund has adhered to its policy objective.

Glossary

Annualised performance: Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month

Fund Specific Risks

Default risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

*The investment performance is for illustrative purposes only. The investment performance is calculated by taking the actual initial fees and all ongoing fees into account for the amount shown and income is reinvested on the reinvestment date.
