

Investment Objective

The Fairtree Global Equity Prescient Feeder Fund aims to create medium to long-term capital growth. To pursue its objective, the fund invests in developed market shares, combining global screening models with the Fairtree active fundamental investment philosophy. The fund is constructed in a diversified manner and aims to provide returns above the benchmark while exhibiting a lower level of volatility in returns relative to the benchmark. The portfolio aims to provide returns above the benchmark.

Investment Policy

The Fairtree Global Equity Prescient Feeder Fund is a global equity fund. The objective of Fund is to provide investors with long term capital growth by investing in global equity markets. In order to achieve this objective, the Fund will invest in selected shares across all industry sectors ranging across large, mid and smaller cap shares. The fund will be exposed to exchange rate risk. The fund may also invest in money market and the Manager may, at its discretion, include in the portfolio listed and unlisted financial instruments for the exclusive purpose of hedging any exchange rate risks.

2026	-1.63%	-2.88%											-4.46%

Since inception till 21 September 2020, the 0.50% fee class was used as this was the most expensive fee class at the time of launch.

MARKET COMMENTARY

The fund returned -2.88% in ZAR for the month, underperforming the benchmark by 3.71%, while the MSCI ACWI Index gained 0.84% in ZAR and 1.29% in USD. Japan and Australia were the strongest performers, rising 8.6% and 7.6% respectively (both in USD). US equities declined in February, with markets falling 0.91%, as investors navigated a sharp and broad-based rotation across equity markets. Several core holdings experienced meaningful valuation declines during the month despite a limited change in underlying business performance. Market behaviour has been heavily influenced by rapid advances in artificial intelligence (AI). This has increased uncertainty around long-term growth, competitive dynamics and valuation assumptions, leading to swift and highly correlated moves across equity markets. Capital has increasingly rotated toward defensives and hard assets. At the same time, areas exposed to the AI theme, particularly enterprise software, selected Big Tech companies, wealth management, financial services, real estate and logistics, have come under pressure. Economic data released during the month continued to point to a moderating but still resilient US economy. Inflation in the US slowed to 2.4% year-on-year in January 2026, its lowest level since May, down from 2.7% in the prior month. Against this backdrop, the Federal Reserve kept policy rates unchanged as policymakers continue to assess whether inflation is sustainably returning to the 2% target. European equity markets delivered solid gains in February, rising 3.27%, as investors responded to improving macro conditions across the region. Eurozone inflation increased slightly to 1.9% year on year in February, up from 1.7% in January, though it remained below the ECB's 2% target. Core inflation also edged higher to 2.4%. Despite the modest uptick in price pressures, the ECB kept its key policy rates unchanged, maintaining the deposit rate at 2% as policymakers continue to assess the sustainability of the disinflation trend and the outlook for economic growth.

Emerging markets delivered another strong month, with the MSCI Emerging Markets Index rising 5.5% in February, with pronounced divergence in performance on a country level. South Korea and Thailand were the standout performers, advancing 23.7% and 20.5% respectively. In South Korea, equities rebounded sharply, supported by strength in technology and semiconductor stocks alongside the government's market support and corporate value-up programme, which helped improve investor confidence and capital market sentiment. By contrast, China was the main detractor, declining 5.8% as investor sentiment toward large internet platform companies weakened. Following a period of strong performance, Chinese technology stocks broadly derated. Weakness in Tencent appears largely sentiment-driven rather than reflective of underlying fundamentals. The ongoing adjustment in China's property market has also continued to weigh on consumer confidence. Households remain cautious and are maintaining elevated savings levels, resulting in a slower recovery in domestic consumption than many had expected. Overall, February performance once again highlighted the continued importance of country-specific drivers within emerging markets.

On a sector level, Industrials and Materials were the best performing sector over the month, where the fund's underweight exposure in Industrials detracted from relative performance. The fund's overweight exposure to Materials and Consumer Staples added to relative performance, while the overweight exposure to Communication Services, Consumer Discretionary and Financials detracted from relative performance. Portfolio activity during February included increasing exposure to several existing holdings, where we used recent share price weakness to top up Microsoft and Thermo Fisher. We added to Impala Platinum to express our positive view on potential upside in the PGM complex. New positions were initiated in TDK Corp and Kikkoman to increase exposure to high-quality Japanese franchises, while positions in Chubb and Arista Networks were added. Coca-Cola was trimmed following relative outperformance, while positions in Mondelez and Costco were exited as valuations appeared less compelling relative to other opportunities in the portfolio.

Notable contributors to fund performance were positions in TSMC (+36bps absolute and +17bps relative), Samsung (+34bps absolute and +14bps relative) and Valterra (+19bps absolute and +18bps relative). Notable detractors from performance over the month came from Amazon (-49bps absolute and -19bps relative), Microsoft (-48bps absolute and -21bps relative) and Prosus (-39bps absolute and -38bps relative). The fund is positioned with an underweight in cyclical names, in favour of technology exposure. From a geographical perspective, the fund remains underweight Canada and the United States, while being overweight Kazakhstan and South Africa.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Portfolio is more diversified than the benchmark, thus holding smaller positions in the largest capitalisation stocks than the benchmark. This comes with the risk of more volatile relative returns to the broader market when the largest stocks in the benchmark outperform. We believe however that this strategy of holding a more diversified portfolio results in lower single stock risk, and whilst there may be periods of underperformance when the large cap stocks rally, we firmly believe in efficient risk management on an absolute basis. The strategy is also exposed to various factors driving investment performance, for example Value and Momentum, and these factors may also experience periods of relative underperformance. Global research has shown however, that consistent long term exposure to these factors lead to investment reward. This portfolio is permitted to invest in foreign securities which may have additional risks (FX Movements for example). However, the portfolio does not currently hold any foreign securities and the manager does not intend on exposing the portfolio to any foreign securities going forward.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
