

**Investment Objective**

The Fund's investment objective is to achieve long term capital growth by investing in global equity markets.

**Risk Indicator Definition**

In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: market risk, liquidity risk, investment risk, currency risk, derivatives risk, counterparty risk, common stocks risk and concentration risk.

**RISK INDICATOR**

**ANNUALISED PERFORMANCE (%)**

**CUMULATIVE PERFORMANCE**

MARKET COMMENTARY

The fund returned 9.89% for the month, underperforming the benchmark by 0.29%, while the MSCI ACWI Index gained 10.17%. The Netherlands and the United States were the strongest performers, rising by 11.3% and 10.5% respectively, while China and Switzerland were the weakest, rising only 3.6% and 3.7%, respectively (all figures in USD).

Global equity markets rebounded strongly in April following the geopolitical-driven sell-off in March. The announcement of a US-Iran ceasefire on 7 April reduced the geopolitical risk premium that had built up over the prior month, with oil prices remaining highly volatile but retracing from their peak levels as broader market sentiment improved. US equities advanced 10.5% in April, driven by strong gains in technology and semiconductor stocks. Investor optimism around AI-related spending and earnings growth continued to build during the month. The rally was also supported by stronger-than-expected first-quarter corporate earnings, particularly among mega-cap technology, cloud infrastructure, and semiconductor companies. Easing concerns around a broader escalation in the Middle East also helped improve sentiment. The Federal Reserve left policy rates unchanged at 3.5% to 3.75% at its April meeting, with the FOMC noting that inflation remains elevated, in part reflecting the recent increase in global energy prices. European equity markets also delivered solid gains over the month, with the MSCI Europe Index rising 7.1%. The European Central Bank held its deposit rate at 2%, with Eurozone inflation rising to 3% in April on higher energy costs linked to the Middle East war, leading the ECB to flag intensified upside risks to inflation alongside downside risks to growth. The Netherlands saw strong returns, rising 11.3% as ASML, which represents roughly 23% of the index, rallied sharply following strong first-quarter results and raised full-year guidance, supported by continued robust demand for its EUV lithography systems used in AI chip manufacturing.

Emerging markets staged a sharp recovery in April, with the MSCI Emerging Markets Index rising 14.71% in USD, more than reversing the previous month's decline. Performance once again diverged meaningfully on a country level. South Korea and Taiwan were the standout performers, advancing 30.7% and 26.2% respectively, supported by a sharp rebound in technology and semiconductor stocks as AI-related demand continued to drive memory and foundry pricing. In South Korea, the KOSPI delivered its strongest monthly return since January 1998, powered by Samsung Electronics and SK Hynix on the back of tight high-bandwidth memory supply. In Taiwan, TSMC rose 22.8% to a record close on the TAIEX. By contrast, Indonesia was the weakest market, declining 5.4%, weighed down by Moody's outlook cut to negative, fiscal deficit concerns and an MSCI announcement flagging investability concerns ahead of its June review. Saudi Arabia slipped 0.6% as the decline in oil prices weighed on broader sentiment. Overall, April performance once again highlighted the continued importance of country specific drivers within emerging markets.

On a sector level, Information Technology was the best-performing sector over the month, where stock picking detracted from relative performance. The underweight to Industrials was the largest relative detractor. The funds overweight to Consumer Discretionary, Financials and Communication Services contributed positively to relative performance.

Notable portfolio actions during April included broadening exposure to energy and financials. New positions were initiated in Sasol and Repsol to capture the improving outlook for oil and gas producers. Within US financials, new positions were initiated in Charles Schwab and CME Group. The fund also added selectively in Japan through new positions in SCREEN Holdings and Japan Material. Other notable additions included Thomson Reuters and Hacksaw, alongside top-ups to Booking Holdings and Berkshire Hathaway. The fund fully exited positions in Qualcomm, MercadoLibre, Boston Scientific and Gold Fields, while existing positions in Amazon and Kaspi were trimmed following strong performance.

Notable contributors to fund performance were positions in Alphabet (+108bps absolute and -5bps relative), Amazon (+98bps absolute and +37bps relative) and TSMC (+62bps absolute and +28bps relative). Notable detractors from performance over the month came from Abbott (-8bps absolute and -6bps relative), McKesson (-5bps absolute and -5bps relative) and Accenture (-5bps absolute and -4bps relative). The fund is positioned with an underweight in cyclical names, in favour of technology exposure. From a geographical perspective, the fund remains underweight in North America, while being overweight in South Africa, Kazakhstan and China.

### Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest Performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Sortino Ratio:** A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Performance Fee Cap:** The maximum performance fee that can be charged over a specified period

### Specific Risk

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives Risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) Risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment Risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest Rate Risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property Risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency Exchange Risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector Risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative Counterparty Risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity Risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity Investment Risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

### Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

### Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Copies of the Prospectus and the annual and half yearly reports of the Company" are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 49 Upper Mount Street, Dublin 2, Ireland or by visiting [www.prescient.ie](http://www.prescient.ie). Copies may also be obtained directly from Fairtree Asset Management (Pty) Ltd (the "Investment Manager")

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Regulation 28 is issued under the Pension Fund Act.
