

PRESCIENT CORE EQUITY FUND (A2)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to deliver returns close to the FTSE/JSE Africa Shareholder Weighted Total Return Index at low cost. Although the Fund is structured similarly to the SWIX, it can out / underperform the SWIX by small amounts over time.

INVESTMENT PROCESS

The Fund follows an investment policy which firstly endeavours to follow the composition of the SWIX closely and secondly seeks enhancement opportunities to secure for investors an optimum overall return. In addition to investing in physical assets, the Fund can use derivatives to create exposure to the SWIX or subsets thereof in a low cost and efficient manner.

WHO SHOULD INVEST

Investors who are seeking long term capital growth through exposure to the South Africa equity market by investing in a fund with a low tracking error relative to the SWIX and who are cost conscious.

RISK INDICATOR DEFINITION

These portfolios typically hold meaningful equity and/or offshore exposure which may result in significant capital volatility over all periods. Due to their nature expected long term returns are higher than for the other risk categories.

RISK INDICATOR

FUND COMMENTARY

Global equity markets continued to deliver a mixed bag of mostly positive performance numbers in May. Developed markets continued to lead the pack with the MSCI World index returning an impressive 4.47%, making new all-time highs and erasing the losses suffered in April, to close the month up 9.52% year-to-date. This was evidently driven by US in the aftermath of another technology sector surge and a solid earnings season. Similarly, European markets rebounded from the previous month's pullback, on the back of seemingly renewed economic confidence and upward revisions to growth estimates. The S&P 500 index and the Eurostoxx index return 4.96% and 3.34% for the month respectively and brought their respective year-to-date returns to 11.30% and 6.76%. Further east, however, the CSI 300 index in China bucked the trend by giving back -0.85% for the month. This ended a three-month streak of positive performance following underwhelming economic data releases. In Japan, the Nikkei 225 index returned to positive territory, recovering from the heavy losses of the preceding months to close the month up 0.39%. With rate cuts obstinately pushed out and the prevailing macroeconomic dynamics, the broader emerging markets continued to lag their developed market counterparts. The MSCI Emerging Markets Index concluded the month with a gain of 0.56%, bringing its year-to-date return to 3.41%.

Despite another 'unchanged' verdict for interest rates by the South African Reserve Bank, the local equity market rallied considerably in the build up to the potentially pivotal national government elections. The market however pared most of these gains on the back on the uncertain election outcome. Industrials were the best performers, up 1.66% and Financials were the notable detractors down 0.68%. The rand, for the first time this year, traded at just over 18.02 to the US dollar before weakening to 18.79 as election results trickled in, closing the month 0.06% weaker.

The FTSE/JSE Shareholder Index closed the month up 0.96%. The Fund was ahead of the benchmark, up 1.01% (gross of fees) for the month.

Contributors to Performance:

The positions that contributed most to the absolute performance of the fund for the month were Richemont (+12.68%), Naspers (+3.35%) and Prosus (+5.79%).

Detractors from Performance:

The largest detractors from the month's absolute performance were Gold Fields (-5.80%), MTN Group (-9.41%), and Capitec Bank (-7.15%).

PRESCIENT CORE EQUITY FUND (A2)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Dividend Yield: The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.

PE Ratio: The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

PRESCIENT CORE EQUITY FUND (A2)

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
