Fairtree Select Equity Prescient Fund

Minimum Disclosure Document - Class A1

31 October 2025

Investment Objective

The Fairtree Select Equity Prescient Fund is an actively managed domestic general equity fund with a focus on maximizing total returns for the client. The objective of the fund is to create medium to long-term capital growth from a selection of high conviction, concentrated equity opportunities, predominantly within the South African market. The fund invests in securities across all sectors of the Johannesburg Stock Exchange (JSE) which trade below intrinsic value or have capital appreciation potential.

Investment Policy

In order to achieve its objective, the portfolio will typically hold 25 shares. The fund is restricted to a maximum of 40 shares. The fund will invest across all industry sections ranging across large, mid and smaller cap shares. Although the portfolio manager will predominantly invest in South African markets, the manager may also include investments in offshore jurisdictions.

MARKET COMMENTARY

Global risk assets navigated another month of policy and geopolitical volatility. The US Federal Reserve delivered a 25 bp cut and kept optionality open for further easing as labour indicators softened, while long-end yields stayed choppy amid fiscal uncertainty and the data fog from the US government shutdown. The investment cycle tied to artificial intelligence remained a central market anchor, with elevated capex and fresh partnerships across hyperscalers and chipmakers. Trade policy again dominated headlines. Against this backdrop, gold punched into record territory before retracing into the month-end, copper stayed supported by supply frictions and de-risking of trade routes, and oil drifted as conflicting signs emerged from supply and the geopolitical landscape.

Domestically, a firmer terms-of-trade pulse from precious and base metals filtered through to a better appetite for local duration. South African government bonds were resilient despite global curve noise. Rates markets moved to price a South African Reserve Bank cut in November, even as near-term inflation remains sticky. Perceptions of sovereign risk improved at the margin after South Africa's removal from the FATF grey list. Discussion around logistics and energy reform remained active, with investors attentive to incremental execution.

Company-specific news: FirstRand (+9%) saw the FCA's update on UK motor finance as positive, removing tail risk scenarios on provisioning. Sanlam (+9%) had a constructive CMD, highlighting execution and shareholder-friendly capital allocation. In retail, the TFG (-16%) update highlighted tough trading in recent months as well as margin pressure and weighed on the sector. AB InBev (+3%) announced a strong $6bn buyback. Impala (-18%) had a poor Q1 production update, with further inventory build.

In conclusion, although global risks remain elevated, South Africa's self-help story continues to unfold—albeit at a slower pace than anticipated. Supportive terms of trade and constructive local developments, including the FATF grey-list removal, provide a measure of resilience. However, persistent global headwinds, particularly the ongoing US trade tensions and elevated US inflation expectations, continue to weigh on risk assets. The Fund remains selectively positioned, focusing on stocks with strong earnings potential and underappreciated growth stories, and is ready to capitalise on market dislocations. The key will be how quickly domestic reforms translate into more tangible economic improvements and whether global factors, such as higher rates and geopolitical risks, continue to weigh on the investment landscape. We suspect fund flows continue to chase the resources rally, forcing underweight local managers to sell SA Inc. names to keep up with benchmark shifts. This further presents the fund with attractive opportunities.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.
NAV: The net asset value represents the assets of a Fund less its liabilities.
Current Yield: Annual income (interest or dividends) divided by the current price of the security.
Alpha: Denotes the outperformance of the fund over the benchmark.
Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.
Standard Deviation: The deviation of the return stream relative to its own average.
Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.
Max Gain: Largest increase in any single month.
% Positive Month: The percentage of months since inception where the Fund has delivered positive return.
High Water Mark: The highest level of performance achieved over a specified period.
Performance Fee Cap: The maximum performance fee that can be charged over a specified period
Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.
Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The portfolio is a high conviction, concentrated portfolio of listed equities across all sectors of the JSE. The portfolio is comprised of our best bottom up ideas, whilst balancing sector specific risks and macro influences. The combination of macro factors and a bottom up fundamental research driven approach, helps us to identify exceptional investment cases that should deliver market beating performance. We actively manage risk and optimize return by managing position sizing. We continually reassess risks and potential returns in changing circumstances, ensuring appropriate portfolio changes to protect capital, while keeping a firm focus on longer term compounding of returns.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
