

Investment Objective

The objective of the fund is to provide long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits, or asset base from emerging economies.

Investment Policy

The Fund's objective may be achieved through investment predominantly in emerging market equity securities across all industry sectors. The Fund may also invest from time to time in equity-related securities and collective investment schemes.

MARKET COMMENTARY

The MSCI Emerging Markets Index rose 14.71% over the month, while the MSCI ACWI Index gained 10.17%. Within emerging markets, South Korea and Taiwan were the standout performers, advancing 30.7% and 26.2% respectively, while Indonesia and Saudi Arabia were the main detractors, declining 5.4% and 0.6% (all figures in USD).

Global equity markets rebounded strongly in April following the geopolitical-driven sell-off in March. The announcement of a US-Iran ceasefire on 7 April reduced the geopolitical risk premium that had built up over the prior month, with oil prices remaining highly volatile but retracing from their peak levels as broader market sentiment improved. US equities advanced 10.5% in April, driven by strong gains in technology and semiconductor stocks. Investor optimism around AI-related spending and earnings growth continued to build during the month. The rally was also supported by stronger-than-expected first-quarter corporate earnings, particularly among mega-cap technology, cloud infrastructure, and semiconductor companies. Easing concerns around a broader escalation in the Middle East also helped improve sentiment. The Federal Reserve left policy rates unchanged at 3.5% to 3.75% at its April meeting, with the FOMC noting that inflation remains elevated, in part reflecting the recent increase in global energy prices. European equity markets also delivered solid gains over the month, with the MSCI Europe Index rising 7.1%. The European Central Bank held its deposit rate at 2%, with Eurozone inflation rising to 3% in April on higher energy costs linked to the Middle East war, leading the ECB to flag intensified upside risks to inflation alongside downside risks to growth.

Emerging markets staged a sharp recovery in April, with the MSCI Emerging Markets Index rising 14.71% in USD, more than reversing the previous month's decline. Performance once again diverged meaningfully on a country level. South Korea and Taiwan were the standout performers, advancing 30.7% and 26.2% respectively, supported by a sharp rebound in technology and semiconductor stocks as AI-related demand continued to drive memory and foundry pricing. In South Korea, the KOSPI delivered its strongest monthly return since January 1998, powered by Samsung Electronics and SK Hynix on the back of tight high-bandwidth memory supply. In Taiwan, TSMC rose 22.8% to a record close on the TAIEX. By contrast, Indonesia was the weakest market, declining 5.4%, weighed down by Moody's outlook cut to negative, fiscal deficit concerns and an MSCI announcement flagging investability concerns ahead of its June review. Saudi Arabia slipped 0.6% as the decline in oil prices weighed on broader sentiment. Overall, April performance once again highlighted the continued importance of country specific drivers within emerging markets.

On a sector level, Information Technology was the best-performing sector over the month, where the fund's substantial underweight detracted from relative performance. The fund's underweight to Energy and Industrials also detracted from relative performance. The fund's overweight holdings in Financials, Consumer Discretionary and Consumer Staples added to relative performance.

On a country level, the portfolio's underweight to South Korea and Taiwan following their rally over the month was the largest detractor from relative performance. Samsung and SK Hynix together account for approximately 51% of the MSCI Korea Index. TSMC represents around 58% of the MSCI Taiwan Index and over 13% of the MSCI EM benchmark. The portfolio maintains a maximum regulatory position limit of 10% per stock, resulting in an unavoidable underweight. The April recovery in emerging markets was predominantly driven by these three names, namely Samsung, SK Hynix and TSMC, underscoring how concentrated the rally was in just a few stocks.

Notable portfolio actions during April included increasing exposure to emerging market technology and AI-related businesses. Within Taiwan, the fund initiated new positions in Nanya Technology, King Yuan Electronics and Chenbro Micom. Within internet and platform businesses, the fund fully rotated its position in Naspers into Prosus and significantly increased its exposure to Tencent. In South Africa, exposure to the energy sector was increased through Sasol, while positions in African Rainbow Minerals and FirstRand were trimmed, and Gold Fields was fully exited. Elsewhere, the fund initiated new positions in OTP Bank in Hungary and PTT Exploration & Production in Thailand. Full exits during the month included MercadoLibre and BTG Pactual in Latin America, Angel One in India and the National Bank of Greece. The existing position in MediaTek was reduced following strong share price performance, while TSMC had to be trimmed as UCITS rules limit a single position to 10% even though TSMC is currently 14.4% of the MSCI Emerging Markets Index.

Notable contributors to fund performance were positions in TSMC (+185bps absolute and -110bps relative), Samsung (+171bps absolute and -40bps relative) and SK Hynix (+101bps absolute and -78bps relative). Notable detractors from performance over the month came from Tencent (-11bps absolute and -1bps relative), Bank Central Asia (-8bps absolute and -6bps relative) and Laopu Gold (-8bps absolute and -7bps relative).

The fund remains overweight in South Africa and Kazakhstan, where we continue to identify compelling bottom-up opportunities. Conversely, the fund remains underweight in China, India, South Korea and Taiwan, with India continuing to trade at elevated valuations relative to broader emerging market peers. The fund has, however, recently reduced its underweight position in Taiwan as opportunities within the AI and semiconductor value chain have become increasingly attractive.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets. In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: liquidity risk, market risk, operational risk, credit risk, interest rate risk and currency risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
