

Investment Objective

The objective of the Fairtree Flexible Balanced Prescient Fund is to create medium to long-term capital growth, within the constraints governing retirement funds - Regulation 28. To pursue its objective, the fund invests in a diversified and balanced range of asset classes. This is achieved through active asset allocation and blending together a collection of the best Fairtree strategies into a diversified portfolio. The portfolio will invest in offshore securities when the benefit of higher returns and portfolio diversification are available. The portfolio aims to provide returns above the benchmark while exhibiting a lower level of volatility in returns relative to the benchmark.

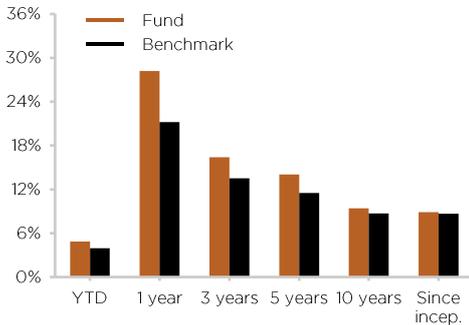

Investment Policy

The Fairtree Flexible Balanced Prescient Fund is a South African Multi Asset Medium Equity. The objective of the portfolio is to offer absolute returns in excess of the South African Multi Asset Medium Equity category average. This is achieved through active asset allocation and blending together a collection of the best Fairtree strategies into a diversified portfolio. While the fund invests predominately in domestic securities, a foreign exposure of up to 45% is allowed.

Since inception till 26 May 2020, class A1 was used as this was the most expensive fee class at the time of launch. The returns indicated above are a stitched performance history of A1 and A3.

MARKET COMMENTARY

Global markets delivered a mixed but broadly resilient performance in February. The MSCI All Country World Index gained approximately 1.3% in US dollar terms, although regional and sector performance diverged. US equities lagged amid weakness in technology stocks, with the S&P 500 declining 0.8% and the Nasdaq Composite falling 3.3%. South African assets were particularly strong, with the FTSE/JSE All Share Index rising around 7%. Commodity markets also strengthened during the month, supported by geopolitical risks and safe-haven demand. Market sentiment was shaped by several key themes, including the scale of artificial intelligence (AI) related investment, uncertainty around US trade policy and rising geopolitical tensions in the Middle East. Despite these concerns, global economic data remained relatively resilient, helping to support risk assets. US markets were volatile during the month as investors reassessed the outlook for technology companies and the scale of investment required to support AI development. Large technology companies announced substantial increases in AI-related capital expenditure, prompting investors to question whether these investments will translate into sustainable earnings growth. Economic data continued to show a resilient economy. Labour market conditions remained firm and growth expectations improved modestly. However, inflation remained somewhat sticky. While headline inflation eased slightly, underlying measures remained elevated, reinforcing a cautious stance from policymakers. Minutes from the Federal Reserve's January meeting highlighted continued concern about inflation risks and reinforced the message that policy decisions will remain data dependent. Trade policy uncertainty also persisted following the US Supreme Court's decision to strike down key elements of previously implemented tariffs, prompting the administration to introduce alternative tariff measures. European markets benefited from improving economic momentum and supportive policy expectations. Business activity indicators showed signs of stabilisation across several major economies, while corporate earnings remained resilient. Inflation continued to trend lower across the eurozone, allowing the European Central Bank to maintain an accommodative policy stance. At the same time, expectations of increased fiscal support, particularly in Germany, helped improve investor confidence. Overall, the region's macroeconomic outlook remains cautious but gradually improving as industrial activity stabilises and financial conditions remain supportive. South African markets delivered another strong month of performance, supported by rising commodity prices and improving domestic fundamentals. The 2026 National Budget was broadly well-received by investors. Government reaffirmed its commitment to fiscal consolidation, with the debt-to-GDP ratio expected to peak during the current fiscal year before gradually declining. Stronger-than-expected revenue collection, partly supported by elevated gold and platinum prices, helped reinforce confidence in the country's fiscal trajectory. Inflation remained well contained, with headline CPI easing to 3.5%, close to the lower end of the South African Reserve Bank's target range. Lower fuel prices helped moderate overall inflation, although food prices rose modestly due to supply constraints in the agricultural sector. Economic data remained mixed, with consumer spending showing moderate growth while labour market data indicated a slight improvement in unemployment. Chinese markets faced a more subdued environment during February as economic data continued to signal stabilisation rather than a strong recovery. Domestic demand remained weak, and inflation pressures were subdued, highlighting ongoing structural challenges within the economy. The property sector continued to weigh on confidence, despite targeted policy measures aimed at stabilising developer funding and improving liquidity conditions. Investor sentiment remained cautious ahead of key policy announcements expected to outline further fiscal and economic support measures. Commodity markets strengthened during February, supported by rising geopolitical tensions and continued demand for safe-haven assets. Gold extended its strong rally, rising approximately 7.9% during the month to above US\$5,000 per ounce. Silver also delivered strong gains, increasing roughly 18%, while platinum group metals posted solid advances, with platinum and rhodium rising in the high single digits and palladium gaining mid-single digits. Energy markets also strengthened. Brent crude oil rose roughly 3% during the month to around US\$72 per barrel, reflecting an increasing geopolitical risk premium as tensions in the Middle East intensified. The US dollar strengthened modestly during the month, although it remains weaker year-to-date. The South African rand appreciated against the dollar, supported by strong commodity prices and improving domestic fiscal sentiment.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Portfolio is diversified across asset classes, although the portfolio's volatility may be dominated by the equities and fixed income portions. The equity portions is concentrated which comes with the risk of more volatile returns relative to the broader market when the stocks invested in underperform. The fixed income exposure may cause permanent capital loss for investors if an issuer of one of the instruments held in the fund defaults. Significant widening in credit spreads on instruments held in the fund can result in short term capital volatility but not permanent capital loss. This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of the market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as fund prices, brochures and application forms please go to www.fairtree.com
