

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

MINIMUM DISCLOSURE DOCUMENT & GENERAL INVESTOR REPORT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

INVESTMENT PROCESS

The Fund invests across a range of assets including equities and interest bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation, but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

RISK INDICATOR

Income Distribution:

31 March 2025 - No Distributions

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

FUND MONTHLY RETURNS

Not available - New fund, data will be available 12 months after launch.

FUND COMMENTARY

Central bank policy diverged across advanced economies toward year-end. The Bank of Japan (BoJ) struck a more hawkish tone at its December meeting, with some board members highlighting the need to reassess ultra-low interest rates. While policy tightening is expected, the BoJ is likely to proceed cautiously, with gradual rate increases. In contrast, the Bank of Canada (BoC) held its benchmark interest rate at 2.25% in early December, a widely anticipated decision. With Canada undergoing a structural adjustment marked by uneven inflation, flat domestic demand, and uncertain trade dynamics, the BoC remains focused on caution. Rate hikes are not expected until late 2026, though stronger employment trends could bring this forward slightly.

The United States experienced a turbulent year, shaped largely by Donald Trump's return to the White House and a renewed shift toward tariffs and protectionist trade policies. U.S. economic growth accelerated to an annualised rate of 4.3% in the latest quarter, up from 3.8% previously and marking the fastest pace in two years. This performance exceeded expectations and outpaced other developed economies, including the Eurozone (2.3%), the United Kingdom (1.3%), and Japan (-2.3%). Despite tighter trade and immigration policies, persistent inflation, and reductions in government spending, the U.S. economy remained resilient overall. These gains helped offset weaker areas such as subdued business sentiment - particularly in intellectual property - and a strained housing market affected by high interest rates, affordability pressures, and limited supply.

In Asia, the International Monetary Fund (IMF) raised its forecast for China's economic growth for 2026 by 0.3 percentage points to 4.5%, supported by domestic stimulus measures and lower-than-expected tariffs. The IMF expects China's average inflation to rise modestly to 0.8% in 2026 from zero in 2025. India continued its rapid ascent, surpassing Japan to become the world's fourth-largest economy with GDP of \$4.18 trillion. It is projected to overtake Germany by around 2030, reaching an estimated GDP of \$7.3 trillion.

South Africa's financial markets delivered strong gains in 2025 despite a challenging domestic economic backdrop marked by sluggish GDP growth of around 1% and unemployment near 32%.

After periods of volatility earlier in the year, U.S. equity markets finished 2025 on a strong note, with the S&P 500 rising nearly 18%, outperforming its long-term average annual return of 10.5%, and US bonds returned 6.3% over the course of the year. The MSCI World returned 21.0% and the MSCI Emerging Markets Index returned 30.6%.

The JSE All Share Index (Total Return) index surged 42.4%, supported by the global equity rally and sharply higher precious metal prices, particularly gold. Bond yields declined meaningfully leading to the local All Bond Index returning 24.2% for the year, reflecting improved investor confidence in the stabilisation of South Africa's debt position. The rand strengthened by 12.3% for 2025, ending the year at 16.56 vs the USD.

Fund performance was positive for the month, mainly due to strong positive performance from local equity.

The Fund currently holds a moderately negative view towards South African and developed market equity as well as local bonds. Our view on the rand also remains moderately negative.

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

GLOSSARY

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

FUND RISK

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

INFORMATION DISCLOSURE

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

DISCLOSURE

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA) for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
