

Investment Objective

The objective of the fund is to provide long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits, or asset base from emerging economies.

Investment Policy

The Fund's objective may be achieved through investment predominantly in emerging market equity securities across all industry sectors. The Fund may also invest from time to time in equity-related securities and collective investment schemes.

MARKET COMMENTARY

The MSCI Emerging Markets Index fell 13.06% over the month. Within emerging markets, South Korea and South Africa were among the weakest performers, declining 18.7% and 18.6% respectively, while Saudi Arabia was the only emerging market to deliver a positive return, rising 4.7%. (all figures in USD)

Markets contended with a sharp rise in geopolitical risk following the outbreak of war involving the US and Iran. The conflict resulted in the closure of the Strait of Hormuz, lifting oil prices materially during the month and adding to concerns around inflation, growth and financial conditions. The shock weighed on global sentiment and drove a broad-based derisking across equity markets. Emerging markets saw a sharp reversal in March, with the MSCI Emerging Markets Index declining 13.06% and performance once again diverging meaningfully at a country level. The sell-off reflected a broad-based risk-off move across the asset class as the sharp rise in oil prices and escalation in geopolitical tensions triggered significant capital outflows from emerging markets. South Korea was particularly affected, given its sensitivity to rising energy prices as a large oil-importing economy. South Africa also came under pressure as weaker global sentiment and concerns around higher fuel costs weighed on the market. By contrast, Saudi Arabia benefited from its leverage to higher oil prices and was the only market to post gains over the month. Overall, March performance again highlighted the importance of country-specific drivers within emerging markets.

At the sector level, Energy was the only positive sector over the month; however, the fund's underweight detracted from relative performance. Stock picking in Information Technology, Industrials, Communication Services, Health Care, Real Estate and Utilities added to relative performance. The fund's overweight exposure to Materials, Consumer Discretionary, Consumer Staples and Financials detracted from relative performance over the period.

On a country level, year-to-date, China and Brazil were the largest detractors to relative performance, driven primarily by stock selection. In China, this was driven primarily by weakness in Prosus and negative sentiment toward its largest underlying asset, Tencent, alongside a broader derating across Chinese technology stocks. Stock picking in Brazil detracted from relative performance over the quarter. Taiwan also detracted, largely due to the portfolio's structural underweight to TSMC, where it represents more than 13% of the benchmark, while the portfolio maintains a maximum position limit of 10% per stock, resulting in an unavoidable underweight. South Korea was another source of relative weakness, as the MSCI Korea Index rose 26.5% over the quarter despite a sharp 18.7% pullback in March, when the market came under pressure from the war-driven rise in energy prices given Korea's sensitivity as a large oil-importing economy.

Notable portfolio actions included increasing exposure to the energy sector through a new position in Sasol. Within PGMs, we rotated exposure by adding to Impala while fully exiting Valterra. We also increased gold exposure through an addition to Harmony, while trimming Goldfields.

Across Asia, we increased exposure to Korea through additions to SK Hynix and Samsung, alongside new positions in Samyang Foods and Meritz Financial, while also adding to TSMC in Taiwan. The existing positions in Naspers and Alibaba were partially switched into a new position in Prosus. In South Africa, we added to the existing position in ABSA Bank while the holdings in Bidvest and Mr Price were sold.

Notable contributors to fund performance were positions in JD.com (+14bps absolute and +12bps relative), Kaspi (+13bps absolute and relative) and Contemporary Amperex (+10bps absolute and +7bps relative). Notable detractors from performance over the month came from Samsung (-118bps absolute and +67bps relative), TSMC (-112bps absolute and +71bps relative) and Impala (-55bps absolute and -49bps relative).

The fund remains overweight in Kazakhstan and South Africa, where we continue to find compelling bottom-up opportunities. Conversely, the fund remains underweight China, India, South Korea and Taiwan, with India and Taiwan continuing to trade at elevated valuations relative to broader emerging market peers.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets. In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: liquidity risk, market risk, operational risk, credit risk, interest rate risk and currency risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.ie. Copies of the Prospectus and the annual and half yearly reports of the Company" are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 35 Merrion Square, Dublin 2, Ireland or by visiting www.prescient.ie. Copies may also be obtained directly from Fairtree Asset Management (Pty) Ltd (the "Investment Manager").

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Fairtree Global Emerging Markets Fund is registered and approved under section 65 of CISCA.
