

PRESCIENT BALANCED FEEDER AMETF (A)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to deliver significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

INVESTMENT PROCESS

The Fund invests in a diverse range of assets including equities and interest-bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

FUND COMMENTARY

The US Federal Reserve faces a complex backdrop ahead of its 9-10 December meeting. With key pricing data delayed during the government shutdown, the extent of recent price increases has been unclear. The most recent reading in September showed annual inflation rising to 3%, up from 2.3% in April. Meanwhile, consumer confidence, as measured by the Conference Board, fell to its lowest level in April following the announcement of the full suite of tariffs. The Consumer Confidence Index (CCI) is one of the indicators the Fed considers when adjusting interest rates, making the upcoming decision particularly significant. With labour-market concerns rising, officials are expected to consider cutting the central bank's key interest rate to support borrowing and stabilise employment conditions.

In Europe, Germany - the region's largest economy - saw a slight improvement in its unemployment rate in November. However, the Federal Employment Agency warned that the labour market remains sluggish. Economic momentum has been difficult to regain, with the third quarter of 2025 failing to deliver an anticipated rebound as US tariffs, global trade headwinds, and increasing competition from China continued to weigh on the country's industrial sector. China, meanwhile, continues to face mounting pressures, with factory activity declining for the longest stretch on record amid a deepening economic slowdown. Nonetheless, policymakers appear in no hurry to intervene aggressively, as the country remains on track to meet its annual growth target of around 5%, despite recent economic softening. Tensions with the US have eased following a temporary trade truce reached during a meeting in South Korea between Presidents Donald Trump and Xi Jinping, though key details are still under negotiation, highlighting the fragility of the agreement. In contrast, Bank of Japan Governor Kazuo Ueda has signalled that the central bank is preparing to continue raising interest rates, though policy will remain accommodative to support Japan's moderate recovery.

Globally, the Bloomberg Global Aggregate Index followed a similar positive trajectory, gaining 0.23%. Global equity performance was mixed - US markets diverged, with the Nasdaq Composite declining -1.51% while the S&P 500 and FTSE 100 posted modest gains of 0.13% and 0.03% respectively. In Asia, the Shanghai SE Composite, the Hang Seng Composite, and the Nikkei 225 all ended the month in negative territory.

Fund performance was marginally negative for the month due to emerging market equity detracting.

The Fund currently holds a moderately negative view towards developed and emerging market equity.

PRESCIENT BALANCED FEEDER AMETF (A)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.
