

FUND OBJECTIVE & STRATEGY

The Fund aims to generate income in excess of money market rates combined with modest capital growth by investing in a range of fixed income assets including cash, NCD's, preference shares, government and corporate bonds and inflation-linked bonds. The Fund may hold listed property and equity, with weightings limited to the sector classification limits. The Fund aims to generate a gross return of CPI plus 1% - 2% over a rolling 12 to 24 month period whilst having a high degree of capital stability. The average duration of the funds investments will typically be in the range of 2-4 years.

FUND INFORMATION

|-------------------------|--|
| Portfolio Managers: | Andrew Vintcent & Grant Morris |
| Inception Date: | 15 February 2022 |
| Fund Size: | R150.4 million |
| Unit Price: | 106.88 cents |
| ASISA Category: | South African Multi-Asset Income |
| Benchmark: | Market value-weighted average return of ASISA category |
| Min Lump Sum: | R10 000 |
| Min Monthly Investment: | R1 000 |
| Issue Date: | 15 October 2024 |
| ISIN: | ZAE000307880 |

WHO SHOULD INVEST

The Fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn, the expected volatility is higher than low risk portfolios but less than high risk portfolios. The probability of losses is higher than low risk portfolios, but less than high risk portfolios.

QUARTERLY COMMENTARY | SEPTEMBER 2024

It was a particularly strong period for the fund, ending +7.0% for the quarter and +18.3% over the last 12 months. The performance is ahead of the benchmark (5.2% for the quarter and 14.1% over 12 months) but of more significance for unit holders, is that the fund's overall objective of generating CPI plus 1%-2% over a 12-to-24-month period has been comfortably exceeded.

Domestic bonds were the key driver of this performance, particularly government bonds with medium to longer term duration. To be more specific, the ALBI ended up 10.5% for the quarter and is now up 26% over the last 12 months. Within that index performance, bonds of medium-term duration (7-12 years) were up 11% for the quarter and 28% over the last 12 months, and longer duration instruments (>12 years) were up 14% for the quarter and 33% for the last 12 months. The concomitant effect of the fall in bond yields is that other interest-rate sensitive counters such as equities (10% of the fund) and property (7% of the fund) also performed well. Key property holdings such as Growthpoint, Fairvest and SAC were all up over 15% for the quarter.

Our interpretation is that a combination of factors has led to a compression in domestic bond yields - a repricing of the SA Credit spread following the election outcome, continued signs that inflationary pressures are abating, a fall in global bond yields and the first interest rate cut (25 basis points) by the SARB since the Covid-19 crisis. Other global central banks also commenced with rate cutting during the quarter, notably the Fed which cut US rates by 50 basis points on the 18th September. The Fed's decision lowers US rates to about 4.9 percent, down from a more than two-decade high. We see the Fed rate cut as a pragmatic move into an environment that is slower and weaker not slow and weak. Their objective is to respond to a clear fall in the inflation data and to prevent the job market from softening further.

QUARTERLY COMMENTARY | SEPTEMBER 2024 CONTINUED

We made a few changes to the fund during the quarter. These changes were principally aimed at extending the funds duration and yield. We rolled over some NCD's at maturity into instruments with longer duration (12m and 24m maturities) and purchased a floating rate corporate bond with an attractive running yield. We sold our position in the R2030 bond, funding a larger position in the R2037 bond. In addition, we continued to build on our holdings in inflation-linked bonds by introducing the R210 bond. Within the equity component of the fund, we sold down some existing positions in Absa, Renert and the Standard Bank Pref share to introduce a position in Exxaro.

Our view is that the current asset allocation is well positioned to meet the funds' stated objective of generating real returns of CPI plus 1%-2%. The duration of the fund is marginally higher than the prior quarter at 2.88 years (2.69 in June 2024) with a gross running yield of 8,8%.

During the quarter, the fund paid out a distribution of R2.5 million for Q3 (1.08 per unit).

The Fund has adhered to its policy objective. The number of participatory units at 30 September was 140 642 525.

The current asset allocation versus the previous quarter is as follows:

| Fund Asset Allocation | Q3 2024 | Q2 2024 |
|-----------------------|---------|---------|
| Bonds | 44% | 41% |
| NCDs | 20% | 23% |
| Domestic Equity | 10% | 10% |
| Property | 7% | 6% |
| Specialist Fund | 20% | 20% |
| Cash | 0% | 1% |

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Months: The percentage of months since inception where the Fund has delivered positive returns.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

GLOSSARY SUMMARY

Annualised Performance:

Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Returns:

The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV:

The net asset value represents the assets of a Fund less its liabilities.

% Positive Months:

The percentage of months since inception where the Fund has delivered positive return.

Net Performance

Unit trust performance is net (after) management fees have been deducted.
