

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

MINIMUM DISCLOSURE DOCUMENT & GENERAL INVESTOR REPORT

31 March 2026

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

INVESTMENT PROCESS

The Fund invests across a range of assets including equities and interest bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation, but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)

FUND MONTHLY RETURNS

Not available - New fund, data will be available 12 months after launch.

FUND COMMENTARY

The dominant theme of March 2026 was the rapid escalation of conflict in the Middle East. What began as a targeted strike by US and Israeli forces on Iran quickly spiralled into a broader regional confrontation, with Iran retaliating against energy infrastructure across the Gulf and tightening its grip on the Strait of Hormuz, through which approximately one-fifth of global seaborne oil traffic passes. The impact on commodity markets was swift and severe. Brent crude, already trending upward since December, spiked to nearly \$120 per barrel at its peak as Gulf producers cut output in response. Equity markets responded with broad risk-off sentiment, while safe-haven assets, such as US Treasuries, the Swiss franc and gold, initially attracted strong inflows.

As a net importer of refined fuel, South Africa quickly sees higher oil prices feed into domestic petrol prices, transport costs and, ultimately, broader consumer inflation. Substantial petrol and diesel price increases are expected to take effect at the start of April, and National Treasury has cautioned that government finances will come under pressure as a result.

Prior to the outbreak of hostilities, the global economy had been showing encouraging signs of momentum - the global PMI output index reached one of its strongest readings since the pandemic in February, pointing to annualised GDP growth of approximately 3%. That backdrop shifted quickly once the conflict escalated, and international institutions moved swiftly to revise their forecasts. Global GDP growth is now projected to ease to 2.9% in 2026, before edging back to 3.0% in 2027, with inflation forecasts revised upward across the board.

Major central banks have responded with caution. Hopes of further rate cuts that prevailed at the start of the year have largely faded, as the inflation implications of sustained energy price pressure complicate the policy calculus. Higher energy costs also come at a difficult time for several major economies where inflation had not yet fully returned to target, including the United Kingdom, the United States, Brazil, Mexico and Turkey. European economies face a particularly sharp adjustment given their dependence on gas imports and already-fragile growth momentum.

On the local monetary policy front, the South African Reserve Bank (SARB) held its repo rate unchanged at 6.75% at its March Monetary Policy Committee (MPC) meeting. Headline and core inflation both stood at 3% in February, precisely in line with the SARB's target, but the anticipated pass-through from higher energy prices is expected to push headline inflation closer to 4% and fuel inflation above 18% in the second quarter. The MPC has explicitly left the door open to raising rates later in the year should oil prices remain elevated and second-round inflation effects - through wage dynamics and broader price-setting behaviour - begin to materialise.

Over the past month global markets sold off aggressively, with Developed Market equity losing -6.37%, Emerging Market equity -13.26%, and US Treasuries declined -1.74%. In South Africa the Top40 index declined -10.85%, SA bonds -6.83% and ILB's -5.73%, while the Rand ended the month 6.70% weaker at 17.00 to the Dollar.

Fund performance was negative for the month, mainly due to poor performance of most risk assets.

The Fund currently holds a neutral view on South African equities, a negative view on developed market equities and a positive view on emerging market equities. Our view on the rand remains has changed to moderately positive.

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

GLOSSARY

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

FUND RISK

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

INFORMATION DISCLOSURE

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

STRATEGIC CAPITAL BALANCED PRESCIENT FUND (A1)

DISCLOSURE

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA) for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
