Minimum Disclosure Document & General Investor Report

Investment objective

The Maestro Equity Prescient Fund will be a general equity portfolio. The Manager in selecting securities for the portfolio will seek to follow an investment policy which will secure for investors an optimum overall return, which is to say the steady growth of income and the preservation of capital in real terms. In order to achieve these main objectives, the investments to be acquired for the Maestro Equity Prescient Fund, shall comprise a mix of securities, financially sound ordinary shares, stock, financially sound preference shares, debenture stock, debenture bonds and unsecured notes as defined in the Act and the Deed, all to be acquired at a fair market value.

The Fund benchmark

The Fund will measure itself against the FTSE-JSE All Share Index.
ASISA Classification: South African-Equity-General.

Legal structure

The Fund is a scheme in the nature of a trust known as a collective investment scheme. The portfolio manager is Maestro Investment Management (Pty) Ltd, an approved Financial Services Provider in terms of the Financial Advisory and Intermediary Services Act, operating under license number 739. This portfolio operates as a white label fund under the Prescient unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Fee structure

The maximum initial fee is 2.0%. The annual investment management fee is 1.75%. The annual total expense ratio (TER) for period ended 31 March 2025, in respect of class A was 2.87%.

Market Overview

Despite the gains registered on most global markets so far this year, and despite the “noise” emanating from the geopolitical scene, global equity markets continued their seemingly inexorable rise to new heights. The US equity market rose nearly every day in September (it only declined on seven of the month’s trading days but most of those declines were marginal); it just kept plodding higher. The German market gave up ground in the early stages of the month but then it, too, resumed its uptrend. The MSCI World index ended the month up 3.1%, bringing its year-to-date return to 16.2%. The US market rose 3.6%, but the German and Swiss markets lost 0.1% and 0.6% respectively. The Hong Kong and Japanese equity markets rose 7.1% and 5.2%, respectively, bringing their year-to-date gains to 33.9% and 12.6%. The tech-heavy NASDAQ index rose 5.6% during September, indicative of the ongoing rally in tech shares. The MSCI Emerging Market index posted a strong monthly gain, rising 7.0%, bringing its year-to-date gain to 25.2%. One of the major events during the month was the lowering of the interest rate by the US Federal Reserve. The 0.25% reduction was widely expected though, which goes to explain why the dollar hardly moved during the month. That said, the dollar has been weak so far this year; the euro has risen 13.4% against the greenback, while the latter has lost 12.2% against the Swiss franc so far this year. Notwithstanding the stable dollar during September, commodity prices were firm, especially those of precious metals. The gold, platinum, palladium and silver prices rose 12.7%, 16.3%, 13.4% and 19.4% respectively during the month. The price of bitcoin rose 5.6%; it has risen 82.2% during the past year. Turning to the bond markets, the Bloomberg Global Aggregate bond index rose 0.5%; it has now risen 7.8% so far this year, but only 2.3% during the past year.

“To achieve great things, two things are needed; a plan, and not quite enough time.”

30 September 2025

Returns for periods ended 30 September 2025

Local market returns

The ongoing strength in the Basic Materials sector knows no end. Coming into September with a 66.0% increase so far this year, the sector rose another 26.4% in September to end the month with a year-to-date gain of 109.8%. This powered the All Share index to a 6.6% gain in September, bringing its year-to-date gain to 31.7%. The strength in mining shares contrasted strongly with the Financial sector during September; it declined 1.8%, while the Industrial sector rose 1.3%. The Large, Mid and Small cap indices rose 7.9%, 4.3%, and 0.9% respectively.

The strength in the prices of precious metals helped the rand gain further ground against the dollar; it rose 2.5% against the greenback, bringing its year-to-date gain to 9.3%. One should remember that there is a strong and historically accurate relationship between precious metal prices and the rand dollar exchange rate. Both rise together and both fall together. The rand is thus likely to remain strong as long as we continue to see a record gold price and further strength in platinum group metals. Local bond markets didn't miss out on the party either. The All Bond index rose 3.4% in September and has now risen 14.2% so far this year.

Investment Manager comment

The Maestro Equity Prescient Fund rose 2.7% in September, versus the 6.6% gain of the All Share index. The underperformance is due to the under exposure the Fund has to gold shares and the basic material sector in general. At the end of September, 7.5% (7.5% last month) of the Fund was being retained in cash. There were no material changes to the Fund's portfolio during September.

The Fund adhered to its Policy objective during the month.

Disclaimer

30 September 2025

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change. The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as fund prices, brochures and application forms please go to www.maestroinvestment.co.za.

Risks

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected. Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company. Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Glossary Summary

Annualized performance: Annualized performance shows longer term performance rescaled to a 1 year period. Annualized performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Total Expense Ratio (TER)

As at 31 March 2025 the TER for Class A units were as follows:

Management Fee	2.00%
Performance Fees	0.00%
Other Cost	0.87%
Total Expense Ratio (TER)	2.87%
Transaction Costs (TC)	0.03%
Total Investment Charge (TIC)	2.90%

Minimum investment:

Lump sum: R100 000

Debit order: R1 000

Risk Profile:

The Fund's risk profile is classified as high as listed equity investments make up the majority of the Fund's holdings. Generally, equities have a higher level of volatility compared with other asset classes, however the expected long term returns are higher than other classes.
